Hiring Team, TikTok

Your Monetization Strategist opening asks for someone who can classify a monetization opportunity as risk or upside with a statistical model, not a gut call. I built the FY2026 Bleeders and Leakers Power BI model at Sensata, scoring 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, and used its discounting and competitive-gap analysis to recover $700K+ in margin in two quarters. That is the same move your req describes as "design metrics frameworks for commercial products" and "analyze key trends," run on an industrial book of business instead of a creator-monetization one.

Attribution is the part of this req I have actually run as a tool problem, not a slide. At Pixis I managed iOS app paid UA through Appsflyer and Adjust and retail media through Amazon Ads and Criteo across an 8-client, $15K-$90K/month portfolio, and used Amplitude and Tableau to pull behavioral signal out of 30+ campaigns, lifting ROAS 40%. Later at Sensata I built KPI frameworks in SQL and GA4 across 50K+ connected devices to find the adoption signal buried in the noise. Different product, same discipline: turning raw event data into a number a PM or a sales leader can act on.

What I think fits this seat specifically is that I have sat on both sides of a pricing or monetization call: the analyst building the model, and now the founder at PriceKeel who has to make that model's output defensible to Finance. I built a guardrail engine there that classifies every discount exception as risk or opportunity against each company's own closed-won and closed-lost data, with an audit trail that documents the evidence behind the call, which is the exact governance layer a research-driven monetization team needs once its metrics framework starts driving real decisions.

I would like to bring that analytics discipline to TikTok's Monetization Products team. Proof trail at adhi-pricing-ai.vercel.app/ref/tiktok.
