Hiring Team, ZoomInfo

At Sensata I owned the CRM, CPQ and lead-scoring handoff behind a 100+ feature backlog myself, so when your posting for GTM Studio said you wanted someone who has worked deep in the revenue tech stack and knows what breaks when data is stale or enrichment fails, that description matched work I have actually done, not a line I am stretching to fit.

I defined and owned the product roadmap for sensor solutions at Sensata, running a 100+ feature backlog with engineering in Agile across 3 regions, which got releases out 25% faster and cut time-to-market 20%. None of that priority call came from guessing. I ran 30+ structured interviews with OEMs and distributors to find where data quality gaps and enrichment failures were actually breaking their workflows, then checked those claims against SQL and GA4 data from 50K+ connected devices before I trusted them, work that lifted CSAT 22% and feature adoption 18%. That same habit, talk to the people running the system daily, then verify against the data, is what GTM Studio needs from whoever owns Audiences and AI Enrichment next.

I also know what it takes to build an AI product from nothing. I built SwipeHire, an AI job-matching platform, zero-to-one on Python, OpenAI's API and React: wrote the PRD, scoped the MVP, and shipped AI-driven candidate-job matching to 50+ early users off my own GTM and analytics stack. At Applied Materials now I automate repetitive analysis with AI agents built on Claude, so pairing product judgment with agentic tooling is not a new habit I would be picking up on your roadmap, it is one I already run daily.

I would welcome the chance to talk through how this maps to req JR107610. Proof trail at adhi-product-ai.vercel.app/ref/zoominfo.
