Hiring Team, Sam's Club

Your posting asks someone to manage the rate card, evaluate inventory volume and turn campaign performance data into revenue decisions. I ran that exact motion at Sensata, building the FY2026 Bleeders and Leakers program that allocated 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, then reprioritizing by segment, win rate and margin gap for leadership every quarter. That is a sell-through and allocation problem, not a flat price list, and it recovered \$700K plus in margin in two quarters while lifting distributor margins from 53% to 61%.

I have since built the decision-engine side of that same problem. PriceKeel, the company I founded, reads a live discount exception inside the deal platform and recommends a guardrail learned from each company's own closed-won and closed-lost history, the same logic a rate card or CPM floor would run against fresh campaign performance data. I set up and run its CRM and CPQ configuration myself, and I built the audit trail that keeps the pricing decision explainable to Finance, so governance sits inside the workflow instead of getting bolted on afterward.

The advertising side is not new either. At Pixis I managed an 8-client retail media advertising portfolio with per-client budgets of \$15K-\$90K a month, running Amazon Ads and Criteo campaigns and carrying P&L targets across the book. One full-funnel restructuring (shopping feed, bidding, creative, lookalikes) delivered 3x ROAS in a single month, and the account strategy behind it cut churn 50% across the portfolio. That is the same instinct this role is asking for: read the performance data, find the revenue sitting in an underused slice of inventory, and move on it before the next review.

I would welcome the chance to bring that discipline to the Yield and Monetization team. Proof trail at adhi-pricing-ai.vercel.app/ref/sams-club.
