

PITCH DECK | SAM'S CLUB MANAGER, ADVANCED ANALYTICS - YIELD & MONETIZATION

This seat turns rate cards, inventory allocation and campaign performance data into revenue decisions across an entire advertising portfolio. I have already run that allocation discipline at portfolio scale.

Portfolio-scale revenue allocation, campaign performance analytics and monetization strategy, from someone who has built the governance behind the decision, not just read the dashboard.

\$627M portfolio allocated across 1,200 pricing opportunities and 20 product lines at Sensata

53% to 61% distributor margin lift from reallocating channel pricing logic

8-client ad book running Amazon Ads and Criteo retail media at \$15K-\$90K per client per month

3x ROAS in one month from a full-funnel campaign restructuring at Pixis

Claude AI agents automating recurring pricing analysis at Applied Materials

Yield and monetization is really one job split three ways: forecast the inventory, allocate it for revenue, and prove the call with performance data, **across every vertical and advertiser at once.**

What losing that discipline runs into

An advertising portfolio without disciplined allocation does not fail loudly. It fails as a rate card that stops matching demand, a sell-through number nobody can explain, and a new ad format that launches without a revenue case behind it.

Sales, Client Success, Measurement and Finance all touch the same inventory decision, so a gap in forecasting or reporting becomes everyone's guessing game at the next planning cycle, not just one team's problem.

The fix is not another spreadsheet. It is someone who treats forecasting, allocation and reporting as one connected loop instead of three separate jobs.

What I have already run

At **Sensata**, I built the Power BI system that allocated 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, the same forecast-to-allocation loop this role runs across verticals and advertisers.

At **Pixis**, I carried P&L targets across an 8-client advertising portfolio, reallocating budget and channel mix on Amazon Ads and Criteo as performance data came in.

Both mean I have sat on the inventory-allocation side and the revenue-reporting side of the same decision, not just one or the other.

A Manager who owns inventory forecasting, revenue optimization through sell-through rate and CPMs, and performance-data-driven recommendations is describing this exact loop: forecast it, allocate it, prove it.

What the Yield & Monetization opening asks for, and where the proof already sits.

What the role covers

- Own inventory management, including forecasting and monitoring inventory across verticals and Advertisers.
- Maximize ad revenue by improving sell-through rate, CPMs, and inventory allocation.
- Leverage campaign performance data to analyze and identify new ways to maximize ad revenue and provide actionable recommendations.
- Serve as a key strategic partner and collaborate with Sales, Client Success, Measurement, Commercialization, Finance, and Technology.

My Proof

- Inventory-style forecasting and allocation:** built and ran the FY2026 Bleeders and Leakers Power BI system, allocating 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines.
- Revenue optimization at the portfolio level:** raised distributor margins from 53% to 61% and recovered \$700K+ in margin in 2 quarters by reallocating channel pricing logic.
- Performance data into action:** ran retail media campaigns on Amazon Ads and Criteo at Pixis, using Amplitude and Tableau across 30+ campaigns to lift ROAS 40% and deliver 3x ROAS in a single month for one account.
- Cross-functional partnership:** built the Finance-facing audit trail behind every pricing call at PriceKeel, and partner with Sales, Engineering and Accounts on market sizing and forecasting at Applied Materials.

Bleeders and Leakers: turn a portfolio of pricing opportunities into a revenue-allocation system.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with a pipeline funnel, regional scorecards, win rate and stage distribution checked before leadership set the next quarter's targets.

At Pixis that same instinct ran on the advertising side: an 8-client retail media portfolio reallocated toward its best-performing channels and formats, cutting churn 50% and lifting campaign ROAS 40%.

What the first month owning Yield and Monetization at Sam's Club looks like.

WEEK 1 Learn the inventory model and the rate card Sit with the Yield and Monetization team to walk current inventory forecasting, rate-card logic and the sell-through and CPM metrics each vertical is measured on, and shadow one revenue-allocation review end to end. ----- Why first: the same instinct that had me learn PriceKeel's own pricing logic before building anything on top of it.	WEEK 2-3 Own a sell-through and reporting cycle Take ownership of one vertical's inventory-allocation model and its performance dashboard end to end: confirm the sell-through and CPM assumptions, build the report, and bring actionable recommendations to the next cross-functional review with Sales and Finance. ----- Why now: the same segment-by-segment discipline that made the Bleeders and Leakers dashboard usable in a leadership review.	WEEK 4 Scope a new revenue opportunity Identify one underused slice of inventory or one new ad-product angle worth a revenue case, using campaign performance data to back the recommendation before the next planning cycle. ----- Why this fast: a monetization strategy only earns its keep if it gets re-tested every cycle instead of running on last quarter's assumptions.

CLOSE

You are hiring someone to turn inventory, rate cards and performance data into revenue across an entire advertising portfolio. I have already built that discipline, from the allocation side and the reporting side.

The core proof is Sensata: a Power BI system allocating **1,200 pricing opportunities against a \$627M target**, distributor margins lifted **from 53% to 61%**, and \$700K+ in margin recovered in 2 quarters.

What is harder to find is someone who has also run the advertiser-facing side: an 8-client retail media portfolio on Amazon Ads and Criteo, reallocated toward its best-performing channels, delivering **3x ROAS in a single month**. I built both halves of this loop, so the allocation discipline this role runs is not something I would need to learn on the job.
