Hiring Team, Impiricus

Your posting describes someone who owns quotation approaches deal by deal, digging into a transaction's own prior terms before setting the price on the next one. I ran that exact motion at Sensata leading the Bleeders and Leakers program: deal-by-deal review of previous deal terms and competitive gaps, recovering \$700K plus in margin in two quarters. That is a transaction-level judgment call, not a rate card exercise.

I have since built the tooling side of the same gate. PriceKeel, the company I founded, reads a live discount exception inside the deal platform and recommends a guardrail learned from a company's own closed-won and closed-lost history. I set up and run its CRM and CPQ configuration myself, the same system-ownership role your posting has DealHub playing for Sales, and I built the audit trail that gives Finance an explainable record behind every exception, so pricing governance is not an afterthought bolted on later.

The dynamic-pricing side is not new either. At Applied Materials I build inflection-point forecasting models that track a launching product's supply-and-demand curve so pricing keeps pace with demand, the same discipline your posting asks for across product launch phases. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard tracking 1,200 pricing opportunities and profitability by segment across 3 regions, 4 product families and 20 product lines, the cross-product reporting cadence a Pricing Lead and Pricing Strategy Manager would lean on here too.

I would also bring the CRM data-stewardship habit your team is asking for. I already keep that hygiene for PriceKeel's own deal data, so cleaning up pricing and quote records inside a growing platform would not be new work for me, it would be the same job at a different desk. Proof trail at adhi-pricing-ai.vercel.app/ref/impiricus.
