Hiring Team, Visa

Your posting asks for someone who can turn market and competitive insight into a go-to-market strategy for your most strategic commercial bank accounts. That is what competitive benchmarking across 10+ players turned into at Sensata: a price realignment that drove +12% YoY revenue and +8% market share. The backbone behind that call was a 1,200-opportunity Power BI model spanning 3 regions and 20 product lines against a \$627M target, the kind of structured analysis that hands leadership a plan to act on instead of a loose set of observations.

That same read on the market shaped multimillion-dollar customer quotes and AP26 site-transition strategy alongside senior Sensata executives, work that only holds up if the narrative translates cleanly for finance, sales and operations in the same room. On the product marketing side, I ran 30+ interviews with OEMs and distributors to find what would actually move a launch, then built the sales enablement and case studies that armed 50+ reps, lifting win rates 30% and keeping messaging aligned with field feedback across EMEA and the US.

At Applied Materials now, I size the semiconductor market with Sales, Engineering and Accounts, turning field and technical input into one view the pricing and product teams plan against, and I run the research side of that work through AI agents built on Claude so the structured analysis moves as fast as the market does. The closest thing I have run to a segment business case from scratch is a Simon Vision Consulting project for Safran, where I led a 5-consultant team from 170 facilities down to a SAM of 28 and presented the market-entry recommendation directly to Safran's leadership. That is the muscle I would bring to the commercial bank segment: size it, benchmark it, and hand your sales and marketing partners a narrative they can use with a client the same week.
