Hiring Team, AWS

Your posting asks for someone who owns the joint marketing plan and the budget for a partner cohort end to end, not someone who passes both along to a geo team and checks in quarterly. I have already done the channel-economics half of that: at Sensata I repriced parts sold through distribution and took distributor and channel-partner margins from 53% to 61% in under two quarters, then owned the GTM for new sensing products across North America and Europe myself, positioning, pricing, channel and launch together, for $2M+ in first-year revenue.

The budget and v-team side of this role is familiar too. At Plug Power I managed $100K/month in marketing budget across multiple business units and built the plans and forecasts that went to senior leadership for sign-off, the same discipline an MDF line needs. At Pixis I ran an 8-person team across 8 client accounts I did not have a direct reporting line to, hiring, coaching and holding each account to its own P&L while cutting churn 50% through account strategy rather than bigger spend.

Joint value propositions are where I have spent the most hours. At Sensata I turned technical features into customer value propositions alongside OEM and distributor partners, running 30+ interviews with them directly, then built the sales enablement that took 50+ reps to a 30% higher win rate. I also covered the cross-geo coordination this role calls for, as the liaison between regional marketing managers, localization and analytics teams keeping one campaign consistent across markets instead of letting each region freelance its own version. Now, as Strategic Marketing III at Applied Materials, I build the pricing and forecasting models that keep pace with a market moving faster than the old process could track, and automate the repetitive parts of that analysis with Claude AI agents so the strategy work gets the hours instead.
