Hiring Team, Andreessen Horowitz

Your posting asks for a PM who can turn a relationship-driven, non-technical team's needs into a clear, prioritized roadmap, and the clearest proof I have is the 30+ structured discovery interviews I ran with OEMs and distributors at Sensata, interviews that turned ambiguous pain points into requirements and lifted CSAT 22%. I also own systems that carry sensitive numbers for a living: I designed the Power BI dashboard that tracked 1,200 pricing opportunities against a $627M target and surfaced $433M in margin gaps for Finance and Sales leadership, the same high-trust reporting shape GPX needs for LP data.

Shipping alongside engineers instead of handing off a spec and waiting is how I work by default. At Sensata I owned the product roadmap and a 100+ feature backlog for sensor systems, working with engineering across 3 regions in Agile to cut time-to-market 20% and speed releases 25%. I also shaped multimillion-dollar customer quotes and revenue models directly with senior executives, the same kind of sensitive-data, high-trust partnering this role needs with Finance and Legal.

On the AI and data side: I run AI agents built on Claude today at Applied Materials to automate recurring market analysis, not just talk about agentic workflows in a meeting, and I built the SQL and GA4 KPI frameworks across 50K+ connected devices that lifted feature adoption 18%. Handling confidential numbers with rigor is not new either: I managed per-client media budgets of $15K-90K/month across 8 accounts at Pixis, carrying P&L and the trust of every one of those relationships.

Frontiers sounds like the shape of team I build well in: small, high-ownership, and built to bring a real product practice to a group that has never had one. I would like to bring that roadmap-to-ship loop to GPX. Proof trail at adhi-product-ai.vercel.app/ref/andreessen-horowitz.
