

PITCH DECK | AFFIRM REVENUE OPERATIONS ANALYST II

Lead routing rules and workflow automations only stay clean if one person owns the wiring end to end. I already own that wiring today, from the CRM configuration to the audit trail behind it.

Lead routing, marketing automation and Salesforce workflow ownership, built and run hands on, not delegated.

50% lower cost per lead automating the WordPress and Pardot flow at Plug Power

50,000+ devices scored for lead intent in a SQL and GA4 framework at Sensata

PriceKeel - runs the CRM, CPQ and audit trail behind every deal, founder to admin

50+ reps trained on new sales enablement tooling and process

Claude AI agents automate recurring reporting work today

The risk at the top of the funnel is not too few leads. It is **routing rules and tooling that quietly drift as volume grows.**

What a growing lead-to-account motion runs into

Lead routing logic, scoring thresholds and data enrichment rules get built once, then nobody owns keeping them current as new sources, campaigns and account types get added.

Marketing automation platforms and Salesforce drift apart quietly: a field renamed on one side stops mattering on the other, and nobody notices until a rep asks why their queue is empty.

The fix is not another dashboard review. It is one person who owns the routing rules, automates the handoff, and documents the change so the next person does not reverse-engineer it.

What I have already run, hands on

At **Plug Power**, I rebuilt the WordPress and Pardot lead flow myself, cutting cost per lead 50% and tying SEM performance to MQL quality and stage 1 pipeline, then automated the surrounding Mar-Tech stack for closed-loop reporting.

At **Sensata**, I built the SQL and GA4 scoring layer that told the team which of 50,000+ connected devices were showing real buying intent, not just traffic.

I run the same loop today at **PriceKeel**: CRM and CPQ configuration, and the documentation trail that lets Finance and Sales trust the process without asking me first.

Lead routing, lead lifecycle management, marketing automation and Salesforce administration are describing this exact loop: own the rule, automate the handoff, document the change, and keep it that way as volume scales.

What the Revenue Operations Analyst II opening asks for, and where the proof sits.

What the role covers

- "Optimize merchant lifecycle processes and define lead routing logic for lead and account management."*
- "Own workflow automations and collaborate on Salesforce improvements."*
- "Support attribution tracking and train revenue teams on process changes."*

My Proof

- Plug Power lead flow:** automated the WordPress and Pardot handoff into Salesforce, cutting cost per lead 50% and tying it directly to MQL quality and stage 1 opportunities.
- Sensata attribution and scoring:** built the SQL and GA4 KPI framework that scored high-intent accounts across 50,000+ connected devices, then trained 50+ reps on the resulting process.
- PriceKeel CRM and CPQ:** set up and run the company's own CRM and CPQ, and documented the audit trail Finance checks every discount call against.
- AI tools as a habit, not a pilot:** automate recurring forecasting and reporting work with Claude AI agents at Applied Materials today.

One automated lead flow, one scoring layer, one rep-facing rollout that stuck.

At Plug Power I owned the lead flow end to end: rebuilding the WordPress and Pardot integration so form fills routed into Salesforce automatically, then automating the Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) so closed-loop reporting ran without a manual export. At Sensata I built the measurement layer on top of that kind of flow and trained the reps who had to use it.

-50%

Cost Per Lead

Automating the WordPress and Pardot handoff into Salesforce, and tying SEM performance directly to MQL quality and stage 1 pipeline opportunities.

50,000+

Devices Scored for Intent

SQL and GA4 KPI framework at Sensata that separated real buying signal from noise, lifting feature adoption 18% once teams could act on it.

50+

Reps Trained on the Rollout

A scoring model only helps if the field team trusts it. Trained the reps on the resulting enablement, lifting win rates 30%.

The common thread: build the automation, measure whether it actually changed behavior, then train the people who have to live with it. That is the same loop I would bring to Affirm's lead routing and Salesforce workflows.

What the first month on Affirm's Revenue Operations team looks like.

WEEK 1 Trace the current lead flow Map today's lead routing logic, scoring rules and data enrichment sources end to end, from first form fill or partner referral through Salesforce assignment, and flag where the rule and the reality have drifted apart. Why first: the drift is usually visible in the queue data before anyone names it. Same move that started the WordPress and Pardot rebuild at Plug Power.	WEEK 2-3 Ship the routing fix Rebuild the specific routing rule or workflow automation causing the worst drift, document the change, and pressure-test it against real leads with Sales and Business Systems before it goes live. Why now: the same sequence, fix then document, cut cost per lead 50% at Plug Power and made the change stick past the first quarter.	WEEK 4 Train the team on it Turn the fix into a short process-change training for the revenue teams that touch it, and set up the attribution view that shows whether the new routing is actually converting better. Why this fast: a routing fix nobody is trained on reverts to the old habit within a month. Training is the step that makes it permanent.
--	---	--

CLOSE

You are hiring someone to keep the top of the funnel predictable, clean and scalable. I have already built and run that exact chain, from the routing rule to the training that made it stick.

The core proof is Plug Power and Sensata: **50% lower cost per lead** from an automated WordPress and Pardot flow, and a **SQL and GA4 scoring layer across 50,000+ devices** that 50+ reps were trained to use.

What is harder to find is someone who also runs that same stack today. I set up and operate **CRM, CPQ and the audit trail behind it as founder of PriceKeel**, which means the lead-routing and workflow-automation instinct behind this role is not something I would need to develop on the job.
