Hiring Team, Affirm

Your posting asks for someone who can make the top of the funnel predictable, clean and scalable: lead routing logic, workflow automation, and a Salesforce setup the revenue team can trust. I automated that exact chain at Plug Power, rebuilding the WordPress and Pardot lead flow so it fed Salesforce automatically instead of through manual review, cutting cost per lead 50% and tying SEM performance directly to MQL quality and stage 1 pipeline opportunities. I also automated the surrounding Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) so closed-loop reporting ran itself instead of a weekly export.

Attribution and lead scoring are the other half of that pipeline, and I built the measurement side too. At Sensata I built KPI frameworks in SQL and GA4 across 50,000+ connected industrial devices, scoring which accounts were showing real intent versus noise, work that lifted feature adoption 18% once product and sales teams could act on it. I also trained 50+ reps on the sales enablement that came out of that data, the same kind of process rollout your posting describes as training revenue teams on new tooling.

I run the operational side of this today as founder of PriceKeel: I set up and operate the company's own CRM and CPQ, and I documented the audit trail Finance uses to check every discount decision, which is the same documentation habit a lead-routing or workflow change needs to survive contact with a live sales team. At Applied Materials I build forecasting models across multiple product groups and keep automating the recurring parts of that reporting with Claude AI agents, so the manual steps do not creep back in once a process ships.

What I like about this specific role is that it is scoped tightly around ownership rather than committee: one person designing the routing rules, running the automation, and documenting the change so the next person does not have to reverse-engineer it. That is the work I already do, and I would like to bring it to Affirm's scale. More detail on the projects above sits at adhithyabhaskar.vercel.app/ref/affirm
