Hiring Team, WEKA

Your posting is clear that you want someone who has built the muscle, not participated in an established program. I built a system from a blank page at Sensata: the FY2026 Bleeders and Leakers tracker, a system of record that took 1,200 pricing opportunities against a $627M target and turned them into a regional scorecard with win-rate views leadership actually opened every week. That is the same build, decide what matters, design the taxonomy and cadence, make people trust it, just run on pricing signal instead of competitive signal.

The research-to-recommendation loop you describe is one I already run end to end. At Sensata I benchmarked competitive pricing and positioning across 10+ key players and fed those findings into a price realignment that drove +12% YoY revenue and +8% market share, then briefed AP26 revenue models and site-transition strategy directly to senior leadership. On the field-intelligence side, I designed and ran 30+ structured interviews with OEMs and distributors and synthesized the output into product changes that lifted CSAT 22%, the same discipline your field intelligence and win/loss loop depends on. At Applied Materials I now do this inside enterprise infrastructure directly: building the market and competitive view for a fast-moving semiconductor market with Sales, Engineering and Accounts, and tracking competitive pricing and packaging shifts as they happen.

You call out AI and automation as tools to make an intelligence program faster, not slower on signal. I already apply AI agents built on Claude to automate the repetitive side of market and competitive research at Applied Materials, the exact judgment call your posting asks for: automation that increases signal instead of noise, not a research program that drowns in its own volume.

What I would bring to WEKA is someone who treats competitive intelligence as a system with an operating cadence, not a one-off deck: $433M in margin gaps surfaced for executive prioritization at Sensata, a Safran market-sizing engagement that took 170 facilities to a defensible SAM of 28 and was presented straight to that company's leadership, and a habit of turning research into something a seller can use in a live deal.
