PITCH DECK | CHAINGUARD SENIOR DEAL DESK ANALYST

One seat here owns quote-to-signature support, CPQ and CLM administration across Roadrunner and Ironclad, and the data integrity that keeps Salesforce honest. I have already run every piece of that loop, just not under those two tool names yet.

Deal-by-deal pricing judgment, CPQ system ownership and a governance trail built for Finance, from someone who has sat on both sides of the quote.

- **$700K+** margin recovered in 2 quarters via deal-by-deal quotation review at Sensata
- **53% to 61%** distributor margin lift from repriced, documented discount logic
- **CRM + CPQ** configuration and audit trail owned end to end, founder of PriceKeel
- **1,200 opportunities** tracked against a $627M target across 3 regions, 4 product families, 20 lines
- **Claude AI agents** automating recurring pricing analysis at Applied Materials

WHY THIS DECK EXISTS

A small but mighty Deal Desk function is really three jobs held well by one person, quote support, system administration and governance.

What losing that discipline runs into

A quote queue without deal-by-deal review does not fail loudly. It fails as an order form approved on last quarter's pricing logic, a CPQ price book nobody updated, and a month-end crunch where nobody can say which deal is actually blocked.

Sales, Finance, Legal and Product all touch the same quote, so a gap in CPQ or CLM data hygiene becomes everyone's guessing game at the next approval, not just one team's problem.

The fix is not another spreadsheet. It is someone who treats quote creation, system configuration and the governance trail as one connected discipline instead of three separate jobs.

What I have already run

At **PriceKeel**, I set up and run the CRM, CPQ configuration and the audit trail myself, the same system-administration and governance loop this role holds for Roadrunner and Ironclad.

At **Sensata**, I owned deal-by-deal quotation review and non-standard contract negotiation inside the Bleeders and Leakers program, then built the Power BI dashboard that kept 1,200 pricing opportunities auditable by segment.

Both mean I have sat on the quote-approval side and the system-configuration side of the same gate, not just one or the other.

A Senior Deal Desk Analyst who delivers quote-to-signature support, administers CPQ and CLM, and keeps Salesforce data clean is describing this exact loop: review the deal, configure the system, keep the governance trail honest.

THE REQ, MAPPED

What the Senior Deal Desk Analyst opening asks for, and where the proof already sits.

What the role covers

> *Deliver full quote-to-signature support, including quote creation, pricing approvals, order form generation, and accurate opportunity closure in Salesforce.*

> *Help administer the CPQ (Roadrunner) and CLM platform (Ironclad), including updates to the company's price books and legal workflows.*

> *Maintain high standards of data integrity and system hygiene across CPQ, CLM and CRM.*

> *Provide pricing insights and analytical support on large, complex or non-standard deal structures, and document Deal Desk processes for scalable growth.*

My Proof

Quote-to-signature support: owned quotation approaches and deal-term investigation inside the Bleeders and Leakers program at Sensata, negotiating multimillion-dollar customer quotes to close with Sales and Finance.

CPQ and CLM-style system administration: set up and run PriceKeel's own CRM and CPQ configuration end to end, including price books and the deal-approval workflow this seat runs for Roadrunner.

Data integrity across systems: kept the Mar-Tech and CRM stack clean for closed-loop reporting at Plug Power, the same hygiene a Deal Desk seat holds across CPQ, CLM and Salesforce.

Non-standard deal structures, documented: recovered $700K+ in margin at Sensata by reviewing non-standard discount exceptions, then built the audit trail that gives Finance an explainable record of every one at PriceKeel.

THE PROOF, IN DEPTH

Bleeders and Leakers: make every quote auditable before it reaches a segment view.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with approval status and profitability by segment checked before leadership set the next quarter's targets.

$700K+

Margin Recovered, 2 Quarters

Deal-by-deal quotation review against competitive gaps and each customer's own deal history, the same investigation a quote queue runs on every non-standard transaction.

53% to 61%

Distributor Margin Lift

Repriced the channel discount logic and documented it for governance review, so the new limits held past the first quarter, not just the one approval.

$433M

Margin Gaps Surfaced

Every gap traced to a specific deal record by salesperson and product line, the same opportunity-level attribution a CRM and CPQ data-hygiene habit protects.

At PriceKeel that same instinct became the operating model: I run the CRM, CPQ configuration and the audit trail myself, so the quote and the governance record are never two different stories.

FIRST 30 DAYS

What the first month owning Deal Desk support at Chainguard looks like.

WEEK 1

Learn Roadrunner, Ironclad and the approval rules

Sit with Sales, Finance and Legal to walk the current CPQ and CLM setup, discount-approval limits and price-book structure, and shadow one quote-to-signature cycle end to end, including order form generation and Salesforce closure.

Why first: the same instinct that had me learn PriceKeel's own CPQ configuration before building anything on top of it.

WEEK 2-3

Own the quote queue through a month-end cycle

Take ownership of the quote queue and approval workflow through one month-end close, resolving blockers on complex or non-standard deal structures and giving Account Executives the pricing insight they need to keep moving.

Why now: the same deal-by-deal urgency that made the Bleeders and Leakers program useful inside a live quarter, not after it closed.

WEEK 4

Tighten CPQ, CLM and CRM data integrity

Clean up one price-book or product-attribution field across CPQ, CLM and Salesforce, document the legal-workflow logic behind it, and flag one Deal Desk process worth writing down before the next quote cycle.

Why this fast: a governance trail only earns its keep if it gets re-checked every cycle instead of trusting last quarter's setup.

CLOSE

You are hiring someone to keep quote creation, system administration and pricing governance honest across every deal. I have already built that discipline, from both sides of the quote.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a $627M target**, distributor margins lifted **from 53% to 61%**, and $700K+ in margin recovered in 2 quarters through deal-by-deal quotation review and multimillion-dollar customer quote negotiation.

What is harder to find is someone who has also spent the last several months owning the CRM, CPQ configuration and audit trail for his own company's deal flow. **I built that at PriceKeel**, so the system-administration and governance discipline this role runs across Roadrunner, Ironclad and Salesforce is not something I would need to learn on the job.
