PITCH DECK | FIVETRAN GTM STRATEGY & PLANNING MANAGER

Fivetran and dbt Labs are becoming one GTM system. Someone has to turn two sets of quotas, territories and installed bases into one bottoms-up plan the field can run on.

Quota setting, territory design and capacity and headcount planning, built from a multi-region pipeline model and run personally today as a CRM, CPQ and forecast-review operator.

- **$627M** pipeline modeled across 1,200 opportunities and 3 regions
- **$433M** in margin gaps surfaced, **$700K+** recovered in 2 quarters
- AP26 revenue models and site-transition strategy with Sales and Finance
- Runs CRM, CPQ and forecast and pipeline reviews today, as a founder
- **Claude AI agents** automating recurring revenue analysis

WHY THIS DECK EXISTS

A GTM Strategy & Planning seat does not lack candidates who can build a quota model from a template. It lacks someone who has already turned one ambiguous top-down number into a defensible operating plan, while the structure underneath it was still moving.

What this seat runs into right now

Fivetran and dbt Labs are combining go-to-market teams, so quota, territory and installed-base segmentation decisions all have to reconcile across two systems before the field notices a gap in coverage.

A top-down revenue number only holds up if the bottoms-up territory and capacity math under it survives contact with Sales, Finance and People at the same time.

Most GTM planning candidates have built one quota or territory model from a stable org chart. Fewer have had to defend a capacity read while the org chart itself was still being redrawn.

What I have already run, at comparable scale

At **Sensata**, built a Power BI system validating a **$627M** pipeline across 3 regions, 4 product families and 20 product lines, scored by salesperson and product line, the exact productivity and attainment read a territory model has to produce every quarter.

Partnered with senior executives on **AP26 revenue models** and site-transition strategy, turning one operating structure into another without the revenue plan losing integrity.

Run the **CRM, CPQ, forecast and pipeline review** cadence personally today as founder of PriceKeel, the standing operating rhythm a GTM planning team runs every quarter.

This req asks for quota-setting, territory design and headcount planning that reconciles top-down revenue targets into a bottoms-up plan Sales, Finance and People can all defend. That is the loop above, run across two different revenue books at once.

THE REQ, MAPPED

What the GTM Strategy & Planning opening asks for, and where the proof sits.

What the role covers

> *"Support annual and quarterly sales quota-setting... contributing to the top-down/bottoms-up reconciliation across AMER, EMEA, and APAC."*

> *"Help apply and maintain the framework for designing territories that are balanced... supporting coverage targets."*

> *"Contribute to headcount planning... tying ramp assumptions and capacity to the revenue plan."*

> *"Produce recurring capacity, attainment, and productivity analyses that inform in-year adjustments to territories and headcount."*

My Proof

Bleeders and Leakers at Sensata: 1,200 opportunities validated against a $627M target across 3 regions, scored by salesperson and product line, the same productivity and attainment read this req asks for quarterly.

AP26 revenue models and site-transition strategy: built with senior executives across Sales and Finance, the coverage and headcount tradeoff this role owns.

8-person team across 8 client accounts at Pixis: carried P&L and revenue targets against a headcount-to-book-of-business ratio, the same balance a territory model has to hold.

$100K/month budgets at Plug Power: owned across multiple business units, building the plans and forecasts presented to leadership for quarterly approval.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: a $627M pipeline validated region by region, scored seller by seller.

Built as a Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, regional scorecards, win rate, avg $/win and stage distribution scored by salesperson and product line, a direct analog to the attainment and productivity reads this req needs every quarter.

$433M

Margin Gaps Surfaced

Ranked every risk into one view instead of chasing it region by region.

$700K+

Recovered in 2 Quarters

Closed through the same productivity read a capacity model needs to catch early.

53% to 61%

Distributor Margin Lift

A coverage and channel-partner program run through the same regional structure a territory model has to protect.

The same seat carried AP26 revenue models and site-transition strategy alongside senior executives across Sales and Finance, turning one ambiguous top-down number into an operating plan the field could run on.

FIRST 30 DAYS

What the first month on Fivetran's GTM Strategy & Planning team looks like.

WEEK 1

Map the combined installed base

Sit with Field Operations and Sales leadership to build one segmentation view across Commercial, Enterprise and the overlay teams, the same first move that built the Bleeders and Leakers dashboard at Sensata.

Why first: a quota or territory model is only as good as the segmentation it is built on.

WEEK 2-3

Pressure-test the first reconciliation

Run the top-down revenue number against 2 to 3 live AMER, EMEA and APAC coverage scenarios with Sales and Finance, and draft the first defensible bottoms-up operating plan.

Why now: building the plan against a real scenario, not a template, is what made the 53% to 61% distributor gain hold at Sensata.

WEEK 4

Ship the first capacity and attainment read

Automate one recurring piece of the productivity-tracking workflow, and present the first in-year adjustment recommendation to Sales leadership and Finance.

Why this fast: the same habit that keeps Claude agents running recurring revenue analysis at Applied Materials today.

CLOSE

You are reconciling two GTM systems into one plan. I have already turned an ambiguous top-down number into a defensible operating plan, more than once.

The core proof is Sensata: a **$627M pipeline** validated across 3 regions and scored by salesperson, feeding directly into **AP26 revenue models and site-transition strategy** built alongside senior executives across Sales and Finance.

What is harder to find is someone running that same discipline right now: as founder of **PriceKeel**, I run the CRM, CPQ and forecast and pipeline review cadence myself with an audit trail Finance can stand behind, and at **Applied Materials**, I reconcile demand signals from Sales, Engineering and Accounts into one shared forecasting model, automated in part with Claude AI agents.
