Hiring Team, Scry AI

At Sensata I built the Bleeders and Leakers program end to end: a dashboard ranking 1,200 pricing opportunities against a $627M target across 3 regions, which surfaced $433M in margin gaps and closed $700K+ of it in two quarters through direct negotiation with Sales and Finance. I built that program myself, from the first pull of the data to the leadership briefing that got it adopted, which is the exact arc your posting describes: coordinate across functions, run the business analysis, brief the people at the top.

I am also running that arc for my own company right now. I founded PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, and I own every part of it: product, the CRM and CPQ stack, the board and investor narrative, and the pilots now live with early customers while I raise the first round alongside them. Carrying a CEO's agenda end to end is not new work for me; it is the job I already hold.

Scry AI builds AI for the enterprise: Auriga for conversational interfaces, Collatio for documents, Concentio for operational intelligence. At Applied Materials I run my own version of that automation, using Claude agents to cut through the repetitive analysis behind market sizing and forecasting, and I bridge Sales, Engineering and Accounts into one market view the way a CEO's office has to bridge product, sales, marketing, operations and finance. The OKR cadence and weekly/quarterly business reviews I run there, and ran at Sensata before a 10-month promotion to Pricing Lead, are the lightweight process a growing company needs someone to design and keep honest.

What I would bring to this seat is the habit of taking a messy cross-functional problem to a number, writing the briefing that explains it, and building the process that keeps it from becoming messy again. Proof trail at adhithyabhaskar.vercel.app/ref/scry-ai.
