Hiring Team, Celonis

I already run the job this role describes, just on my own company. At PriceKeel, I own the CRM, the deal-approval process and the executive-facing numbers end to end, the same connective tissue a Chief of Staff provides between a principal's office and the rest of the business. The problem Celonis is built to solve, giving every team and AI agent one shared view of how work actually happens, is the same problem I solve for one person's agenda every day: take scattered input and turn it into one view a leader can act on.

That instinct carries into a much larger company too. At Applied Materials I turn scattered input from Sales, Engineering and Accounts into one market view, and run the OKR cadence behind weekly and quarterly business reviews so cross-functional teams stay pointed at the same number. At Sensata I built the AP26 revenue models and site-transition strategy directly with senior executives for a multi-\$100M business, and recovered \$700K+ in margin in two quarters by running a negotiation program off competitive and willingness-to-pay research. Both jobs are the same test an executive office runs: turn someone else's priority into a decision, then get people outside your own function to act on it.

The AI tool development piece of this role is also already how I work. I run Claude agents to automate the repetitive research and reporting work in my own day job, and I would bring that same build-it-yourself habit to the AI assistants, operating guardrails and briefing workflow this office needs. I have also hired and managed teams end to end, from an 8-person account team at Pixis to the team behind my own SwipeHire product, so the operating and people side of the role is not new ground either.
