Hiring Team, Fivetran

Your posting describes the operational backbone of a pricing and monetization strategy: governance cadences, tracked commitments, resolved escalations, an expanding playbook. That is close to a literal description of the FY2026 Bleeders and Leakers program I built and ran at Sensata, where I set the governance cadence myself, tracked 1,200 pricing opportunities against a \$627M target across 3 regions and 20 product lines, and recovered over \$700K in margin in two quarters by resolving the pricing escalations that were quietly costing deals.

The cross-functional coordination side of the role is the same muscle. At Sensata I partnered with senior executives on AP26 revenue models and multimillion-dollar customer quotes, and built the sales enablement a 50-person rep team used to close, lifting win rates 30%. Today I run that same operational loop for my own company: I set up and run PriceKeel's CRM, CPQ, forecast and pipeline reviews, and deal approvals, and built the audit trail Finance would need to trust every pricing decision. I have built that kind of program from both the builder's side and the operator's side, which is a different thing than having only watched one run.

Fivetran and dbt Labs are mid-integration, which means the pricing and monetization playbook this role owns is being written in real time, not maintained from an existing runbook. I like that kind of ambiguity better with structure wrapped around it. I already automate the repetitive side of market and revenue analysis with Claude AI agents in my current role at Applied Materials, which frees up the time a program at this stage actually needs for judgment calls instead of data pulls.

I would like to bring that program discipline to Fivetran's pricing and monetization roadmap. Proof trail at adhithyabhaskar.vercel.app/ref/fivetran.
