Hiring Team, Baseten

Your posting asks for someone who can sit with engineers, understand what a feature actually does, then write the narrative that makes a technical buyer act on it. That is the job I already do at Applied Materials, where I align Sales, Engineering and Accounts into one market view for a business that moves as fast as the semiconductor cycle does, and it is the job I did at Sensata before that.

At Sensata I owned GTM for a new line of sensing products sold to OEM and distributor engineers, technical buyers who do not respond to adjectives. I wrote the positioning that lifted conversion 15% on priority launches, ran 30 customer interviews to find where the pitch was not landing, then built the sales enablement, decks and case studies, that took a 50-person rep team's win rate up 30%. I know what it takes to turn an engineering roadmap into a story a non-engineer can act on, because I have built that pipeline from customer interview to case study to closed deal.

I also build with the tools your team is marketing. I hold all four Claude certifications and run AI agents built on Claude weekly at Applied Materials to automate forecasting and market analysis, and I shipped SwipeHire, a job-matching platform built on the OpenAI API, from a blank PRD to 50+ users, including the competitor teardowns and GTM positioning that got it there. Marketing a post-training platform to developers works better when the person writing the copy has actually shipped something on top of a model API, not just read about one.
