Hiring Team, DoorDash

The first line in your Key Responsibilities, size target Dasher audiences and cohorts and decide which segments to prioritize, is the part most GTM candidates skip past to get to the campaign work. I start there. At Applied Materials I turned scattered field and technical input from Sales, Engineering and Accounts into one addressable-market view before anyone touched pricing or messaging. At Simon Business School I led a 5-consultant team that sized Safran's addressable market from 170 facilities down to a SAM of 28 and built personas across 4 verticals. That is where I would start on DashLink, Catering, Alcohol or Parcels too.

Once a segment is sized, the next question is whether it is real. At Sensata I ran 30+ structured willingness-to-pay interviews with OEMs and distributors before committing to a positioning for a new sensing product line, then scaled the GTM across North America and Europe to $2M+ in first-year revenue. The KPI frameworks I built in SQL and GA4 across 50K+ connected devices told me which cohorts were actually adopting, not just which ones a launch plan assumed would. That is the same read a pilot needs before anyone recommends a national launch at a weekly business review.

I also like building from zero, which is most of what a new earning opportunity actually is. I shipped SwipeHire, an AI job-matching platform, solo end to end: PRD, MVP, pricing and GTM, with 50+ early users and no playbook to follow. Today I automate the repeatable parts of my own analysis with AI agents built on Claude at Applied Materials, so more time goes to the part of the problem nobody has structured yet. I'm Bay Area based, which puts your San Francisco team an easy commute away.

I would like to talk about which new earning opportunity is closest to its first segmentation decision and what a credible TAM looks like for it. More of the work is at adhi-product-ai.vercel.app/ref/doordash.
