PITCH DECK | DOORDASH MANAGER, DASHER INTEGRATED MARKETING - EXPANSION & NEW BUSINESS BETS (SAN FRANCISCO)

# The posting opens with sizing the Dasher audience and picking which segment to prioritize. I have run that exact sizing motion twice, once on a market and once on a sensing-product line that closed its first year at $2M+.

*A 5-consultant TAM/SAM/SOM study that cut 170 facilities to a SAM of 28, a one-view market model built with Sales and Engineering, and 30+ interviews that decided a positioning before it shipped.*

- **170 to SAM 28** TAM/SAM/SOM sizing led for Safran across 4 verticals
- **One market view** built with Sales, Engineering and Accounts at Applied Materials
- **30+ interviews** with OEMs and distributors before a positioning was written
- **$2M+ first-year revenue** from the GTM that followed at Sensata
- **AI agents built on Claude** automating my own recurring analysis today

WHY THIS DECK EXISTS

# Before a single campaign runs, someone has to decide which Dasher segment is worth a pilot's budget in the first place.

### What the posting actually asks for

Define and size target Dasher audiences and cohorts for each new earning opportunity, including TAM and which segments to prioritize first.

Turn that sizing into hypotheses, run primary research against it, and translate the findings into positioning and roadmap input.

Set success criteria before a pilot runs, then decide honestly whether to scale, iterate or stop.

### What I have already sized, the same way

At **Applied Materials**, I turned scattered Sales, Engineering and Accounts input into one addressable-market view before pricing or messaging touched it.

At **Safran** (Simon Vision Consulting), I led 5 consultants through TAM/SAM/SOM sizing from 170 facilities to a SAM of 28, with personas across 4 verticals.

At **Sensata**, that sizing fed a GTM I owned end to end, hypothesis to pilot to scale, to a $2M+ first year.

> The through-line: the segment gets sized and tested before a dollar goes into the launch, on every build on this page.

THE MANDATE, MAPPED

# What the posting asks for, in its own words, and where the proof already sits.

## What the role covers

> *"Define and size target Dasher audiences and cohorts for new earning opportunities, including TAM and which audience segments to prioritize."*

> *"Own product-market fit work: form hypotheses, design and run research, and translate findings into positioning."*

> *"Run small-scale pilots to validate demand before investing in a national launch; decide whether to scale, iterate or stop."*

> *"Mentor and influence cross-functional partners as the marketing lead for new business bets."*

## My proof

**Safran TAM/SAM/SOM, 170 to 28:** led 5 consultants through sizing and segmentation, personas across 4 verticals, positioning for 3 B2B product lines.

**Applied Materials, one market view:** turned Sales, Engineering and Accounts input into a single addressable-market model feeding pricing and forecasting.

**Sensata GTM, new sensing products:** sized the market, ran 30+ interviews, then scaled positioning to $2M+ first-year revenue.

**Hired and managed an 8-person team at Pixis:** set the tone and playbooks for 8 client accounts, the same mentoring this role expects across Product, Brand, CRM and Operations.

THE PROOF, IN DEPTH

# Size the segment first, then let the numbers decide whether it earns a national launch.

Three different environments, same sequence: size the market, test the segment, let the answer decide the next move before the spend goes up.

## 170 to SAM 28

**Facilities Sized Down To A Real Segment**

TAM/SAM/SOM study led for Safran, with personas across 4 verticals and positioning for 3 product lines.

## 30+ Interviews

**Before The Positioning Was Written**

Structured willingness-to-pay research with OEMs and distributors at Sensata, run before the launch plan, not validated after it.

## $2M+ Revenue

**First Year, Sizing To Pilot To Scale**

The full arc this role runs on a new Dasher earning opportunity, owned end to end at Sensata.

None of these numbers existed before someone sized the audience first. That is the habit, not a one-time result.

FIRST 30 DAYS

# What the first month sizing and testing a new Dasher earning opportunity looks like.

WEEK 1

## Size the audience and pick the segment

Pull what Dashers are already saying about the newest earning opportunity (support tickets, forums, UXR and Audience Insights data), size the TAM, and rank the segments worth a pilot's budget first.

**Why first:** the same TAM-to-segment motion behind the Safran study and the Applied Materials market model.

WEEK 2-3

## Run the primary research and set success criteria

Design and run the surveys, interviews and concept tests that confirm or kill the segment hypothesis, working with Product, Design and Strategy & Ops to set the pilot's success criteria before it launches.

**Why now:** the same 30+-interview discipline that decided Sensata's positioning before it shipped.

WEEK 4

## Launch the pilot and instrument the scale decision

Ship the small-scale pilot across in-app, owned and earned channels, wire the SQL/GA4 read that tells scale from iterate from stop, and bring an AI-agent-automated version of that report, the same habit running at Applied Materials today.

**Why this fast:** a scale decision only holds up once the segment behind it was sized correctly.

CLOSE

# You are hiring someone to size a segment correctly before a pilot ever gets a national budget. I have run that sizing twice, then followed it all the way to a $2M+ first year.

At **Safran**, a TAM/SAM/SOM study that cut 170 facilities to a SAM of 28 across 4 verticals. At **Applied Materials**, one market view built from Sales, Engineering and Accounts input that now feeds pricing and forecasting.

At **Sensata**, that same sizing discipline fed a GTM I owned end to end: 30+ interviews before a positioning line was written, and a first year that closed at **$2M+** in revenue on a conversion lift of **+15%**. I automate the repeatable part of that analysis today with AI agents built on Claude, so research time goes to the segment nobody has sized yet.
