Hiring Team, Apollo.io

Your posting names Claude Code twice, once for prototyping ideas before engineering picks them up, once as proof of an AI-native builder. I hold the Claude Code 101 Certification and use AI agents built on Claude every week at Applied Materials to automate forecasting and market analysis, so that line was not a stretch to answer, it was already how I work.

Expansion is the part of the funnel I already own. At Sensata I built the BU-wide price-increase model and led the repricing that moved distributor margins from 53% to 61% and drove revenue up 12% year over year, the same "when does a customer pay more" logic behind seat upsells, credit purchases and plan upgrades. Before that I ran the roadmap and 100+ feature backlog for the same business, instrumenting KPI frameworks in SQL and GA4 on 50,000+ connected devices to find the usage signals that predicted an upgrade, not just a login.

I also know what it takes to ship a monetization surface with nobody else doing it for you. SwipeHire is a job-matching product I built zero to one: I modeled three subscription tiers from competitor benchmarks and willingness-to-pay data, then ran the A/B tests on the activation funnel myself, the same ship-to-learn loop your squads run with a Designer, a Data Science partner and an Engineering Manager. I like working inside that structure because it forces the tradeoff conversation instead of avoiding it.

Proof trail at adhi-product-ai.vercel.app/ref/apollo-io.
