Hiring Team, Cribl

Your posting asks for someone who can turn segmentation and territory data into something a Sales VP will actually trust in a business review, and that is the exact work behind Sensata's Bleeders and Leakers program. I built the Power BI dashboard that segmented 1,200 opportunities by region, product line and salesperson against a $627M target, turning a messy pipeline into regional scorecards with win rate, avg $/win and stage distribution that leadership used to prioritize $433M in margin gaps. That program recovered $700K plus in margin in two quarters and raised distributor and channel-partner margins from 53% to 61%, the kind of account and opportunity level diagnostics that make territory and compensation planning defensible instead of guesswork.

Data integrity is the part of RevOps that breaks quietly, so I have made a habit of owning it end to end rather than handing it off. As founder of PriceKeel, a B2B SaaS deal-pricing company, I run the CRM and CPQ myself and documented the audit trail Finance uses to check every discount decision, the same discipline a Salesforce workflow needs to stay clean once a fast-growing sales team depends on it every day. At Plug Power I automated the Mar-Tech stack across Salesforce, Adobe Analytics, GA and Google Tag Manager for closed-loop reporting, so the numbers in the dashboard matched the numbers in the pipeline instead of drifting apart.

The strategic-advisor half of this role, briefing senior stakeholders and shaping how a business reads its own pipeline, is also work I already do. At Applied Materials I build forecasting and market-sizing models across multiple product groups and run the team's operating cadence of OKRs and weekly and quarterly business reviews. At Sensata I partnered directly with senior executives on revenue models and multimillion-dollar customer quotes, so I am used to being the person who has to defend a number in the room, not just produce it.

Cribl's remote-first, multi-timezone setup is the kind of fast-paced and ambiguous environment where a self-starter who owns their own data pipeline end to end gets more done than one who waits for a cleaner handoff, and that is how I have run every RevOps seat so far. More detail on the work above sits at adhithyabhaskar.vercel.app/ref/cribl
