Hiring Team, Receptive

Your posting says the person in this seat is in the ad accounts every day, making the calls on pacing, bids and creative rotation, not briefing an agency and reviewing slides. That is exactly how I ran paid at Plug Power: I owned the account structure, bid logic and keyword strategy myself across Google, Microsoft and Meta on $100K/month in spend, and cut CPA 25% while tying every one of 50+ inbound campaigns back to MQL quality and stage 1 pipeline, not a vanity click number.

The CAC-versus-scale trade-off you describe is the job I already had at Pixis. I carried P&L for an 8-client, $15K-$90K-per-client-per-month portfolio and cut churn 50% through channel diversification instead of defaulting to more spend. On one fashion account I rebuilt the full funnel, shopping feed, bidding, creative, and the landing page the click actually lands on, for 3x ROAS in a single month, then ran that creative-testing cadence (message, audience, format) across 30+ campaigns using Amplitude and Tableau to read signal before touching bids. That is the same instinct your posting asks for: check the funnel before touching creative, and know when to let a test run versus cut it.

Attribution in a compliance-heavy category is its own skill, not an afterthought. At Plug Power I built the closed-loop reporting stack across Salesforce, Adobe Analytics and Google Tag Manager so channel decisions rested on more than platform-reported numbers, and at Applied Materials I now run that reporting on AI agents built on Claude instead of rebuilding the same analysis every cycle, the same instinct behind using AI to keep landing-page velocity high without losing rigor. For TNC's insurance-billed Medical Nutrition Therapy and GLP-1 programs, where a self-reported conversion and a platform-reported one can tell two different stories, that discipline matters more, not less.
