Hiring Team, Whatnot

The system I would want to rebuild first here is the kind I have already built from scratch. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard from the ground up: 1,200 pricing opportunities tracked against a $627M target across 3 regions, 4 product families and 20 product lines, with win-rate, stage-distribution and regional scorecards that sales and regional leadership used every week. That is the job your posting is describing: not managing a process someone else built, but shipping a reporting system people actually run on.

I like that this role sits at the seam between Performance Marketing, Influencer and Creative, because that is where most of my work has lived. At Plug Power I automated the Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) for closed-loop reporting, then automated the WordPress-to-Pardot lead flow on top of it, cutting cost per lead 50%. At Applied Materials I now automate recurring analysis with Claude AI agents, the same instinct your posting names directly: find the manual grind and build the system that replaces it.

The measurement half of this role is where I would move fastest. At Sensata I built KPI frameworks in SQL and GA4 where none existed, across 50K+ connected devices, to find the signals that actually mattered. At Pixis I rebuilt a churn-prone account process after diagnosing the structural problem behind it rather than patching the symptom, and cut client churn 50% across an 8-client portfolio. Creative fatigue, attribution noise and localization drift are not new problems to me; they are the ones I have spent the last few years building systems around.

I would like to bring that same instinct to the operational layer behind Whatnot's paid creative engine as it scales globally. Proof trail at adhi-growth-ai.vercel.app/ref/whatnot.
