

PITCH DECK | STANLEY BLACK & DECKER MANAGER, MARKET INTELLIGENCE

Tools & Outdoor needs one clear read on the US, Europe and international markets, built from multiple data sources and told as a story a category leader can act on. I have already run that loop, twice.

Cross-regional competitive benchmarking, market sizing, dashboard storytelling and stakeholder trust, the pieces the posting names, each with a proof point attached.

\$433M in margin gaps surfaced from a 3-region, 20-product-line Power BI dashboard at Sensata

10+ competitors benchmarked, +8% market share and +12% YoY revenue

170 facilities to a SAM of 28, market-entry feasibility presented to Safran leadership

EMEA and US competitor reads turned into revenue-opportunity calls at Sensata

Semiconductor market sizing with Sales and Engineering at Applied Materials today

The job is not "watch the market." It is **turn trends from three regions into one recommendation leadership can act on this quarter.**

What that actually requires

Trends, competitive moves, consumer behavior and channel dynamics have to be tracked across the US, Europe and other priority markets at the same time, not region by region in isolation.

The data never arrives as one clean feed. It has to be synthesized from several sources into a single clear takeaway before a category or brand leader can use it.

None of it moves the business if it stays a spreadsheet. It has to become a dashboard or a deck that a non-technical stakeholder can act on in the room.

What I have already run

At **Sensata**, I ran competitor and customer analysis across EMEA and the US at once, turning purchasing patterns and competitor market share into revenue-opportunity calls for category leadership.

At **Sensata** again, I built the FY2026 Power BI dashboard that synthesized pricing, channel and competitive data into one view across 3 regions, 4 product families and 20 product lines.

At **Applied Materials** today, I size the semiconductor manufacturing market with Sales and Engineering, the same cross-functional intelligence loop Tools & Outdoor runs on.

The through-line: every market read I have shipped was pulled from more than one region and more than one data source, then handed to a leader as a clear call, not a raw export.

What the posting asks for, and where the proof already sits.

What the role covers

- "Monitor market trends, competitive activity, consumer behavior, and channel dynamics across the U.S., Europe, and other priority international markets."*
- "Synthesize multiple data sources into clear, concise insights and recommendations for business leaders and cross-functional partners."*
- "Build presentations, dashboards, and visualizations that clearly communicate what is happening in the market, why it matters, and what actions should be considered."*
- "Compare trends across regions and markets, highlighting key differences in consumer needs, competitive intensity, pricing, channel structure, and market maturity."*

My proof

- Sensata, cross-regional read:** competitor and customer analysis run across EMEA and the US at once, turned into revenue-opportunity calls for category leadership.
- Sensata, multi-source synthesis:** the FY2026 Power BI dashboard combined pricing, channel and competitive data into \$433M in margin gaps for leadership to prioritize.
- Sensata and Applied Materials, storytelling:** leadership decks and OKRs behind every quarterly business review, both roles.
- Safran project, global comparison:** a 10+ competitor benchmark and 150+ facility review across 4 verticals, sized down to a SAM of 28.

Multiple sources become one dashboard, the dashboard becomes a leadership call, and the call moves share.

Same loop, three stages, each with a measured result: cross-regional data synthesis, competitive benchmarking, and the storytelling that turns an insight into a decision.

\$433M Surfaced

Sensata, FY2026 Power BI Dashboard

1,200 pricing opportunities modeled against a \$627M target across 3 regions, 4 product families and 20 product lines, flagged for leadership by region and line.

+8% Market Share

Sensata, 10+ Competitor Benchmark

Pricing realigned on a competitive benchmark across 10+ players, closing with +12% YoY revenue alongside the share gain.

170 to a SAM of 28

Safran, Global Market Sizing

150+ target facilities and 10+ competitors analyzed across 4 verticals, with market-entry feasibility presented to Safran leadership.

None of these stages ran alone. The cross-regional read fed the benchmark, and the benchmark fed the leadership deck, one intelligence pipeline, not three separate reports.

What the first month on Tools & Outdoor's Market Intelligence function looks like.

WEEK 1

Map the current intelligence sources

Sit with category management, brand insights and the regional stakeholders already using market and consumer data, and with the external data, research and analytics suppliers already in place, to find where the coverage is strong and where it is not.

Why first: the same first move that turned Sensata's EMEA and US reads into one view before proposing anything new.

WEEK 2-3

Ship the first cross-regional read

Build the first US-versus-Europe comparison on a live category question, combining internal commercial and channel data with existing supplier outputs, documented the way the FY2026 Sensata dashboard was.

Why now: the same discipline that turned Sensata distributor and competitive data into \$433M in surfaced margin.

WEEK 4

Present the first story to category leadership

Package the read into a presentation and dashboard built for a non-technical audience, and run the first review cadence with cross-functional partners so the insight becomes an action, not a report that sits.

Why this fast: the same cadence that carries the leadership decks and OKRs behind every quarterly review at Applied Materials and Sensata.

CLOSE

You are hiring someone to turn trends from three regions and several data sources into a call category leadership can act on. I have already run that loop on hardware, twice.

The core proof is one Sensata loop run at scale: a cross-regional EMEA-and-US competitor read, built into a **Power BI dashboard surfacing \$433M in margin gaps**, closed with pricing moves that drove **+8% market share and +12% YoY revenue** off a 10+ competitor benchmark.

What carries into Tools & Outdoor is the global-comparison habit behind the Safran project, 170 facilities sized down to a SAM of 28, and the storytelling habit behind every leadership deck I have built since. At Applied Materials today I automate the recurring version of that reporting with AI agents built on Claude, so the hours go into the next regional read, not rebuilding the last one, and the muscle is one a junior analyst on the team can learn to repeat.
