Hiring Team, Snap Inc.

Your posting describes the job as making sure Snap shows up well at the moment a plan gets built, with the data a planner needs to size Snap and defend it. I have sat on the other side of that exact moment: sizing an ad platform against a client's budget and defending the number to the client who owns it.

At Pixis, I ran 8 advertiser accounts at once on Amazon Ads and Criteo, carrying P&L targets on per-client budgets of \$15K to \$90K a month across that portfolio, the same multi-account, multi-budget math this role builds tools around, just from the buyer's side of the table instead of the platform's. I cut client churn 50% through proactive account strategy and channel diversification, and I know what a planner needs in front of them before they will trust a platform's numbers, because I was the one who had to defend those numbers upstream.

Turning scattered input into one shipped spec is the other half of this role, and it is the throughline of my last two years at Sensata. I owned the product roadmap and a 100+ feature backlog, taking requirements from Sales, Engineering and distributors and shipping releases 25% faster. I then built the FY2026 Power BI portfolio dashboard that tracked 1,200 pricing opportunities against a \$627M target across 3 regions and 20 product lines, surfacing \$433M in margin gaps for leadership to act on, the same portfolio-level reporting and intelligence this role ships for agencies managing many accounts at once.
