Hiring Team, Google

Your posting asks for value propositions and messaging frameworks a cross-functional GTM team can actually launch on. That is the exact shape of the work I owned at Sensata: I wrote the positioning and messaging that turned deep sensor-engineering detail into language OEM and distributor buyers acted on, took that new sensing line to \$2M+ first-year revenue, and lifted conversion 15% on the launches that mattered most.

The cross-functional half of the role is the part I'd point to first. I partnered with Engineering on the product roadmap in Agile across 3 regions, running a 100+ feature backlog and cutting time-to-market 20%, and ran 30+ customer interviews to feed real user insight straight back into that roadmap instead of letting it sit in a research deck. I now run the same motion at Applied Materials, coordinating Sales, Engineering and Accounts on one market view instead of three competing ones.

Your preferred qualifications ask for AI productivity tools used to solve real workflow problems, not just mentioned on a resume. I automate recurring market and pricing analysis with AI agents built on Claude in my current role, and before that I built an AI product zero-to-one end to end: PRD, MVP, positioning and launch, on my own. I also ran iOS app user acquisition through Appsflyer and Adjust earlier in my career, so the in-app engagement and KPI side of a consumer launch is not new territory.

Google's iOS consumer work gets to shape the roadmap, not just promote it after the fact. That is the seat I want: close enough to Product and Engineering to represent the user, and accountable for the campaign that follows. Proof trail at adhi-product-ai.vercel.app/ref/google. Happy to talk whenever works on your side.
