Hiring Team, Reducto

Your posting describes turning recurring exceptions into better rules, integrations and guidance, and that is the exact loop I run at PriceKeel. I built a guardrail engine that reads a live discount exception inside a deal platform and recommends a path forward instead of a hard stop, then wrote the audit trail that gives Finance evidence for every call. I also set up and run the company's own CRM, CPQ, forecast reviews and deal approvals end to end, so this is not a workflow I have read about. I am the one who built and runs it.

Before PriceKeel I ran deal approvals at scale inside a multi-$100M business unit at Sensata. The Bleeders and Leakers program used a Power BI system tracking 1,200 pricing opportunities against a $627M target to recover $700K+ in margin in two quarters, and I raised distributor and channel-partner margins from 53% to 61% by repricing the underlying contract terms. I also shaped AP26 revenue models and multimillion-dollar customer quotes directly alongside senior executives, the same non-standard deal review a deal desk seat runs against commercial terms and payment structures every day.

Your posting is specific about using AI and automation daily and owning the accuracy of the output. At Applied Materials I automate recurring pricing analysis with Claude AI agents instead of re-running the same check by hand every cycle, and at PriceKeel the automation and the governance trail are the product, not a side project. Being the first dedicated hire does not worry me. Running a function end to end from zero is what I have been doing since May.

What I would bring to Reducto's deal desk is someone who has already built the tooling this seat is asked to maintain and extend, not just operated inside it. Proof trail at adhi-pricing-ai.vercel.app/ref/reducto.
