PITCH DECK | REDUCTO DEAL DESK LEAD

Reducto's first dedicated deal desk hire has to keep quoting, contracting, CRM, billing and payments as one connected loop, not four separate handoffs that quietly drift. I already run that loop for my own company's deal flow.

Deal-by-deal commercial judgment, CPQ and CRM ownership, and the automation discipline to turn a recurring exception into a better rule, from someone who has built the governance trail, not just filled in the quote.

- **$700K+** margin recovered in 2 quarters via deal-approval review at Sensata
- **53% to 61%** distributor margin lift from repriced contract terms
- **CRM + CPQ + audit trail** owned end to end, founder of PriceKeel
- **1,200 opportunities** tracked against a $627M target with full pipeline visibility
- **Claude AI agents** automating recurring deal and pricing review at Applied Materials

WHY THIS DECK EXISTS

A first dedicated deal desk hire is really four jobs stitched into one person: deal structuring, policy judgment, the Legal handoff, and the automation that keeps it all connected to billing.

What losing that discipline runs into

A first deal desk hire does not fail loudly. It fails as a quote approved on last quarter's discount policy, a redline that sits with Legal for a week because nobody gave it commercial context, or a signed deal that goes live with the wrong billing setup.

AEs, Legal, Customer Success and Finance all touch the same deal, so a gap in approval guidance or system handoff becomes everyone's guessing game at the next renewal, not just one person's backlog.

The fix is not another policy document. It is one person who treats quoting, contracting and the billing handoff as one connected system instead of three separate jobs.

What I have already run

At **PriceKeel**, I built the guardrail engine that scores discount exceptions against a company's own closed-won and closed-lost history, and the audit trail that gives Finance evidence for every approval, the same policy-and-exception judgment this seat runs on every deal.

At PriceKeel I also set up and run the **CRM, CPQ, forecast reviews and deal approvals** myself, so I have sat on the system-ownership side of the handoff, not only the approval side.

At **Sensata**, I shaped AP26 revenue models and multimillion-dollar customer quotes directly with senior executives and raised distributor margins from 53% to 61% by repricing the underlying contract terms, the same commercial-terms judgment a Legal redline runs on.

A Deal Desk Lead who owns daily operations, reviews pricing and discount exceptions, partners with Legal on redlines, and maintains the automation into billing is describing one connected loop, not four separate jobs. That is the loop I already run.

THE REQ, MAPPED

What the Deal Desk Lead opening asks for, and where the proof already sits.

What the role covers

> *Review pricing, commitments, discounts, and payment terms against our policies. Identify exceptions, recommend a path forward, and drive decisions with the right approvers.*

> *Partner with Legal on customer redlines and non-standard agreements. Provide the commercial context, clarify open questions, and coordinate with the AE.*

> *Own the handoff from signature to a working account: billing configuration, provisioning, contractual account settings, and the initial invoice.*

> *Maintain and improve our deal desk automation and build new integrations across quoting, contracts, CRM, billing, and payments.*

My Proof

Exception judgment and approver routing: built the guardrail engine at PriceKeel that scores discount exceptions against closed-won and closed-lost history, and ran deal-by-deal quotation review inside Sensata's Bleeders and Leakers program, recovering $700K+ in margin in 2 quarters.

Commercial context for non-standard terms: shaped AP26 revenue models and multimillion-dollar customer quotes directly with senior executives, and repriced distributor contract terms to lift margins from 53% to 61%.

Signature-to-billing ownership: set up and run PriceKeel's own CRM, CPQ, forecast reviews and deal approvals end to end, the same system-of-record ownership this handoff needs.

Automation and integrations: built the audit trail and guardrail logic from scratch at PriceKeel, and automate recurring pricing analysis with Claude AI agents at Applied Materials, the habit this seat asks for on day one.

THE PROOF, IN DEPTH

Bleeders and Leakers: make every exception visible before it reaches an approver.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel and stage visibility checked before every approval cycle.

$700K+

Margin Recovered, 2 Quarters

Deal-by-deal quotation review against competitive gaps and each customer's own deal history, the same investigation this seat runs on every transaction.

53% to 61%

Distributor Margin Lift

Repriced the channel's contract terms and documented the change for governance review, so the new discount limits held past the first quarter.

$433M

Margin Gaps Surfaced

Every gap traced to a specific deal record by salesperson and product line, the same deal-record accuracy a quote-to-cash handoff needs.

At PriceKeel that same instinct became the operating model: I run the CRM, CPQ configuration, deal approvals and the audit trail myself, so a deal's commercial terms and its governance record are never two different stories, the same connection Reducto's deal desk automation is meant to hold.

FIRST 30 DAYS

What the first month owning deal desk at Reducto looks like.

WEEK 1

Learn the automation and the contracting playbook

Sit with Account Executives, Legal and Operations to walk the existing deal desk automation, the order form, services agreement, DPA and BAA playbook, and shadow one deal from commercial terms through signature end to end.

Why first: the same instinct that had me learn PriceKeel's own CPQ configuration before changing anything on top of it.

WEEK 2-3

Own a deal desk cycle and one automation fix

Take end-to-end ownership of deal structure, discount review and approver routing for a live cohort of deals, and ship one integration or rule improvement that turns a recurring exception into a documented policy.

Why now: the same guardrail-to-rule instinct that built PriceKeel's discount-exception engine.

WEEK 4

Tighten the signature-to-billing handoff

Audit one signed deal's billing configuration, provisioning and contractual account settings against what the order form promised, and flag one renewal or amendment pattern worth a template update before the next cycle.

Why this fast: a quote-to-cash handoff only earns trust if it gets checked every cycle instead of assuming last quarter's setup still holds.

CLOSE

You are hiring someone to own deal desk end to end, from commercial terms to the first invoice, and to keep improving the automation underneath it. I have already built that loop for my own company.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a $627M target**, distributor margins lifted **from 53% to 61%**, and $700K+ in margin recovered in 2 quarters through deal-by-deal quotation review and approver routing.

What is harder to find is someone who has also spent the last several months owning the CRM, CPQ configuration, deal approvals and audit trail for his own company's deal flow. **I built that at PriceKeel**, so the system ownership and automation discipline this seat runs is not something I would need to learn on the job.
