Hiring Team, DoorDash

Your posting says the person in this seat will quickly become an expert on a brand-new business line and build its pricing models before any playbook exists for it. I built that exact playbook at Sensata leading the Bleeders and Leakers program: root-causing margin gaps against competitive data and each customer's own willingness to pay, which recovered $700K plus in margin in two quarters and then raised distributor margins from 53% to 61% as the business scaled. That is pricing judgment under ambiguity, not a rate card exercise.

PriceKeel, the company I founded, is the same instinct built into a product. It reads a live discount exception inside a deal platform and recommends a guardrail learned from a company's own closed-won and closed-lost history. I set up the CRM, CPQ and deal approvals myself and built the audit trail Finance can check against, so standing up process, models and tools from zero for a new line is work I already run day to day.

The analytical side matches your ask too. At Applied Materials I build forecasting and market-sizing models in SQL and Excel across multiple product groups, forecasting inflection points so pricing keeps pace with demand, and I automate the repetitive parts of that analysis with Claude AI agents, which is the AI-tool fluency your posting calls out directly. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, the kind of cross-functional reporting that keeps Sales, Finance and Engineering working off one number instead of three.

What you are describing, pricing a new business line from scratch while protecting margin and accelerating speed to revenue, is the discipline I already run. Proof trail at adhi-pricing-ai.vercel.app/ref/doordash.
