PITCH DECK | DOORDASH ASSOCIATE MANAGER, GTM STRATEGY & PRICING

# Drive's newest business line needs pricing models, playbooks and a margin-protection process before anyone has written the rate card. I have already built all three, from zero, more than once.

*Deal-level pricing judgment, zero-to-one playbook building and AI-assisted analysis from someone who treats speed to revenue and margin protection as the same job, not two.*

- **$700K+** margin recovered in 2 quarters by root-causing margin gaps at Sensata
- **53% to 61%** distributor margin lift from repriced discount logic
- **CRM + CPQ + deal approvals** set up and run from zero, founder of PriceKeel
- **1,200 opportunities** tracked against a $627M target across 3 regions, 20 product lines
- **Claude AI agents** automating recurring pricing analysis at Applied Materials

WHY THIS DECK EXISTS

# A brand-new business line does not get a pricing playbook for free. Someone has to build it while the deals are already closing.

### What losing that discipline runs into

A new line without a pricing model does not fail loudly. It fails as a deal priced on gut feel, a margin that slips because nobody root-caused the first bad quarter, and a Sales team improvising terms deal by deal because the playbook does not exist yet.

Business Development, Logistics, Product and Engineering all touch the same new line, so a gap in pricing structure becomes everyone's guessing game the first time a deal gets contested.

The fix is not a spreadsheet after the fact. It is someone who treats pricing, process and margin protection as one build, started on day one.

### What I have already run

At **Sensata**, I led the Bleeders and Leakers program: root-causing margin gaps against competitive data and customer willingness to pay, recovering $700K+ in margin in 2 quarters and raising distributor margins from 53% to 61% while the business kept scaling.

At **PriceKeel**, I set up and run the CRM, CPQ and deal approvals myself, the same playbook-from-zero discipline a brand-new business line needs on day one.

Both mean I have built the pricing structure and protected the margin on the same business, not handed one off to someone else.

**An Associate Manager who strategizes, builds, analyzes and influences across Business Development, Logistics, Product and Engineering to scale a new business line is describing exactly that build, done under speed-to-revenue pressure, not after it.**

THE REQ, MAPPED

# What the Associate Manager opening asks for, and where the proof already sits.

## What the role covers

*Understand the needs of our partners, prioritize those needs by impact, assess tradeoffs, and design solutions to drive both speed and quality outcomes.*

*Bring structure to undefined opportunities by creating and implementing high-impact playbooks, models, processes, and tools.*

*Solve key problems with a data-driven, first-principles approach: identification, sizing, pricing, impact, root causing, trade offs.*

*Work cross-functionally with Business Development, Logistics, Product, and Engineering teams to rapidly scale new business.*

## My Proof

**Strategize, by impact:** the Bleeders and Leakers dashboard at Sensata ranked $433M in margin gaps by salesperson and product line so leadership prioritized the highest-impact fixes first.

**Build, from undefined:** set up PriceKeel's CRM, CPQ and deal approvals from zero, and built the FY2026 Bleeders and Leakers Power BI dashboard covering 1,200 opportunities against a $627M target.

**Analyze, first-principles:** build forecasting and market-sizing models in SQL and Excel at Applied Materials, and root-caused the margin gaps behind Sensata's $700K+ recovery.

**Influence, cross-functionally:** shaped AP26 revenue models and multimillion-dollar customer quotes with senior executives, and partnered Sales, Engineering and Accounts into one pricing view at Applied Materials.

THE PROOF, IN DEPTH

# Bleeders and Leakers: turn an undefined margin problem into a prioritized, auditable playbook.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with win rate, avg $/win and stage distribution checked before leadership set the next quarter's targets.

## $700K+

**Margin Recovered, 2 Quarters**

Root-caused against competitive gaps and each customer's own deal history, the same first-principles discipline this seat needs for a line with no pricing history yet.

## 53% to 61%

**Distributor Margin Lift**

Repriced the channel logic while volume kept scaling, protecting margin instead of trading it away for speed to revenue.

## $433M

**Margin Gaps Surfaced**

Every gap traced to a specific deal by salesperson and product line, the segment-level detail a new business line's first dashboard needs.

At PriceKeel that same instinct became the operating model: I build the pricing structure, the CRM/CPQ system and the deal approvals myself, so the playbook and the margin protection are never two separate projects.

FIRST 30 DAYS

# What the first month owning pricing for Drive's new business line looks like.

WEEK 1

### Learn the product, operations and merchants

Sit with Sales and Business Development on live deals for the new line, map the current pricing and quoting process end to end, and pull the first data cut on where margin is already leaking.

**Why first:** the same groundwork that let me root-cause Sensata's margin gaps before proposing a single fix.

WEEK 2-3

### Build the first pricing model and playbook

Stand up a pricing model for one segment of the new line, document the playbook so Sales can run it without me, and present the first speed-to-revenue read to the cross-functional team.

**Why now:** the same build-from-zero discipline that stood up PriceKeel's CRM, CPQ and deal approvals in month one.

WEEK 4

### Tighten the margin-protection process

Turn the first month's pricing data into a lightweight dashboard flagging deals at risk of margin leakage, and hand Sales one guardrail to apply before the next pricing review.

**Why this fast:** a margin guardrail only earns its keep once it is checked every cycle, the same cadence behind Sensata's dashboard.

CLOSE

# You are hiring someone to price a new business line from zero while protecting margin and accelerating speed to revenue. I have already built that playbook, more than once.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a $627M target**, distributor margins lifted **from 53% to 61%**, and $700K+ in margin recovered in 2 quarters by root-causing gaps against competitive data and customer willingness to pay.

What is harder to find is someone who has also spent the last several months building that same discipline from zero for his own company. **I built PriceKeel's CRM, CPQ and deal approvals myself**, so standing up pricing structure for a line with no playbook yet is not something I would need to learn on the job.
