PITCH DECK | BEATO ENTREPRENEUR IN RESIDENCE

Your next growth engine needs someone who owns the full P&L from zero to meaningful revenue, not just the launch plan. I have run that loop twice already, with the number attached.

A $700K+ margin program built from zero at Sensata, and a live B2B SaaS P&L I own and run today at PriceKeel.

- **Own the P&L, right now**: PriceKeel, built, piloted and raising its first round
- **$700K+ recovered** from a margin program built with no existing tool
- **$2M+ first-year revenue** from a product line taken zero to launch at Sensata
- **Zero-to-one shipped**: SwipeHire, PRD to 50+ users
- **AI agents built on Claude** automating my own recurring analysis

WHY THIS DECK EXISTS

The job is not "launch a product." It is owning the P&L from a raw hypothesis through validation to a real growth engine.

What that actually requires

Define the customer, the offer and the pricing, then validate it cheaply before spending real budget on it.

Own the full P&L once it works: revenue, margins, unit economics and burn, not just the top-line number.

Assemble and lead a team using the company's existing product, supply chain and operations capability.

What I have already run

At **PriceKeel**, I own the full P&L today: product, pricing, pipeline and fundraising, built and validated with real pilot customers before scaling.

At **Sensata**, I turned a vague margin mandate into the Bleeders and Leakers program, recovering $700K+ in two quarters, and separately took a new product line to $2M+ in first-year revenue.

At **Pixis**, I hired and managed an 8-person team running 8 client P&Ls, carrying revenue targets across the whole portfolio.

> **The through-line: every P&L I have carried started with no existing playbook and ended with a number leadership could act on, not a plan that stayed on a slide.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Validate the idea quickly through low-cost experiments; scale only what evidence supports."*

> *"Own the full P&L: revenue, margins, unit economics, burn."*

> *"Assemble and lead the team, using the company's product, clinical, supply chain, operations capabilities."*

My proof

Validate before scaling, PriceKeel: ran pilots with real customers before expanding the product, the same low-cost-experiment discipline this role asks for.

P&L ownership, Sensata: carried revenue and margin targets on a multi-$100M business, recovering $700K+ in two quarters.

Zero to meaningful revenue, Sensata: took a new sensing-product line from launch to $2M+ in first-year revenue.

Team assembly, Pixis: hired and managed an 8-person team running 8 client accounts on real P&L and retention targets.

THE PROOF, IN DEPTH

Validate cheap, then own the number, then build the team around it.

The same three-step pattern, run at PriceKeel and Sensata and on SwipeHire: test the hypothesis before spending real money, carry the P&L once it proves out, then hire the team that scales it.

$700K+ Recovered

P&L Ownership, Sensata

1,200 opportunities ranked against a $627M target, closed through direct negotiation, no existing tool to start from.

$2M+ Revenue

Zero-to-Launch, Sensata

A new sensing-product line taken from zero to $2M+ in first-year revenue across North America and Europe.

50+ Users

Validated Before Scaling, SwipeHire

PRD to MVP to first 50 users, with 3 pricing tiers tested against real willingness-to-pay signals before expansion.

None of these were a plan that sat in a deck. Each one became a working pilot, a signed outcome, or a P&L a real team depended on.

FIRST 30 DAYS

What the first month inside BeatO's new growth vertical looks like.

WEEK 1

Define the customer, offer and price

Pull BeatO's existing user base and supply chain capability, and frame the new vertical's first testable hypothesis the way PriceKeel's first pilot was framed.

Why first: the same first move behind every build I have run, size the real question before spending on it.

WEEK 2-3

Run the low-cost experiment

Validate the offer with a small set of real users before committing budget, the same discipline that got SwipeHire to 50+ users before any paid scaling.

Why now: evidence before spend, not the other way around.

WEEK 4

Own the P&L and start the team

Apply the Sensata margin-recovery discipline to the unit economics of the new vertical, and start assembling the team it needs to scale.

Why this fast: a bias for action without waiting on perfect data, the same call made at every seat so far.

CLOSE

You are hiring someone to own a P&L from a raw hypothesis to a real growth engine. I have run that loop twice already, with the number attached.

The P&L half: **$700K+ recovered in two quarters** at Sensata by turning an ambiguous margin mandate into signed outcomes, and **$2M+ in first-year revenue** from a product line taken zero to launch.

The builder half: **PriceKeel, live and raising its first round**, and **SwipeHire, shipped zero-to-one** to 50+ early users, validated before scaling, exactly as this role asks.
