PITCH DECK | HINGE HEALTH PRODUCT MARKETING MANAGER, NEW VERTICALS

Turning complex products into clear stories is not a new ask for me. I took a product line with no established GTM motion to $2M+ in first-year revenue doing exactly that.

A 30% win-rate lift from enablement built for 50+ reps, and a 15% conversion lift from turning technical specs into customer value.

- **$2M+ first-year revenue** from a new product line with no existing GTM motion
- **+30% win rate** from sales enablement built for 50+ reps on a technical product
- **+15% conversion** from turning technical specs into customer value
- **+22% CSAT** from 30+ customer interviews turned into product fixes
- **AI agents built on Claude** automating my own recurring analysis

WHY THIS DECK EXISTS

The job is not "write the messaging." It is building the approval case and the enablement that gets a new vertical adopted.

What that actually requires

Fast product expertise, turned into clear positioning and objection-handling for approval conversations, not just a feature list.

Enablement that reps and client teams actually use, built from real field feedback, not written once and forgotten.

Adoption measured separately from approval coverage, with the data to prove the launch is working.

What I have already run

At **Sensata**, I took a new sensing-product line with no established GTM motion to $2M+ in first-year revenue, owning positioning, pricing, channel and launch end to end.

I turned technical sensor specs into customer-facing value propositions that lifted conversion 15%, then built the enablement that got 50+ reps to actually sell it.

I ran 30+ customer interviews to find where the story broke, and the fixes those interviews drove raised CSAT 22%.

> **The through-line: every launch I have owned started with no established GTM motion, and ended with a real adoption number, not just a messaging doc.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Create and improve messaging, FAQs, and objection-handling resources for health-plan approvals and client conversations."*

> *"Drive client readiness and adoption through launch communications and live enablement."*

> *"Define what adoption looks like with Client Success, and track adoption separately from approval coverage."*

My proof

Approval-ready messaging, Sensata: turned technical sensor specs into customer-facing value propositions that lifted conversion 15%.

Live enablement, Sensata: built decks, case studies and objection-handling resources for 50+ reps, lifting win rates 30%.

Adoption vs. reach, Sensata: built SQL and GA4 KPI frameworks across 50K+ connected devices that separated real adoption signal from noise, lifting feature adoption 18%.

Influence without authority, Applied Materials: turns Sales, Engineering and Accounts input into one view today with no reporting line over any of them.

THE PROOF, IN DEPTH

Build the story, equip the field, then prove the adoption number.

The same three-step pattern, run at Sensata: turn a technical product into a story, build the enablement that gets it sold, then measure whether it actually landed.

$2M+ Revenue

New-Vertical GTM, Sensata

A sensing-product line with no established GTM motion, taken from zero to $2M+ in first-year revenue.

+30% Win Rate

Field Enablement, 50+ Reps

Decks, case studies and objection-handling resources built for reps selling a technical product with no consistent story.

+22% CSAT

Voice of Customer, 30+ Interviews

OEM and distributor interviews turned directly into product fixes, closing the loop from feedback to adoption.

None of these were a messaging deck that sat in a folder. Each one became a story reps used in the field and a number Client Success could track.

FIRST 30 DAYS

What the first month on Hinge Health's New Verticals team looks like.

WEEK 1

Build product expertise and the approval map

Learn the new vertical's differentiators and the specific objections health plans and clients are likely to raise, the same fast-ramp discipline behind the Sensata launch.

Why first: the approval story has to be right before any enablement goes out.

WEEK 2-3

Ship the first enablement and run live sessions

Build the decks, FAQs and objection-handling resources Client Success needs, then run the live enablement sessions that got Sensata's reps to 30% higher win rates.

Why now: enablement only works if the field is in the room for it, not reading a doc alone.

WEEK 4

Define adoption separately from approval coverage

Set the adoption measures with Client Success and build the KPI framework that separates real usage from reach, the same discipline that surfaced 18% adoption lift at Sensata.

Why this fast: leadership needs a concise read on progress and risk from week one, not month three.

CLOSE

You are hiring someone to turn a complex product into a clear story and get it adopted. I have already run that loop, with the revenue and the adoption number attached.

The story half: **$2M+ in first-year revenue** from a new product line with no established GTM motion, and a **15% conversion lift** from turning technical specs into customer value.

The adoption half: **+30% win rate** from field enablement built for 50+ reps, and the SQL/GA4 discipline that separates real adoption from reach, exactly what this role's year-one goals ask for.
