PITCH DECK | ITERABLE SENIOR DEAL DESK ANALYST

Your Deal Desk needs someone who can build the process and run the deals through it at the same time. I have already done both, with the margin recovered to prove it.

A $700K+ margin program built from zero at Sensata, and a CPQ and deal-approval process I built and run today at PriceKeel.

- **$700K+ recovered** from 1,200 deal-economics models built with no existing tool
- **53% to 61%** distributor margins raised by fixing pricing logic, not overriding it
- **CRM/CPQ built from zero** and run end to end as founder, PriceKeel
- **50+ reps equipped** with sales enablement that lifted win rates 30%
- **AI agents built on Claude** automating my own recurring analysis

WHY THIS DECK EXISTS

The job is not "process the queue." It is building the system and making the judgment call on every exception that runs through it.

What that actually requires

A CPQ and approval process built well enough that Sales, Finance and Legal all trust it, not just a queue someone else designed.

Deal economics modeled in enough depth to recommend a structure, not just approve or reject a discount request.

The judgment to know when to make the call, when to push back, and when to escalate.

What I have already run

At **PriceKeel**, I built the CRM, CPQ and deal-approval process from zero and run every exception through it myself.

At **Sensata**, I modeled deal economics across 1,200 opportunities and closed $700K+ of margin in two quarters by recommending structures that worked for both sides.

At **Applied Materials**, I turn competing Sales, Engineering and Accounts input into one view leadership can act on, without needing authority over any of them.

> **The through-line: every deal-desk system I have touched went from ad hoc overrides to a documented, trusted process, and the margin number moved every time.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Model deal economics, including margin, attach rate, and payment terms, and propose alternatives when a deal falls short of targets."*

> *"Spot bottlenecks in quoting, approvals, and contracting, then design and roll out the fix, including automation and AI-assisted workflows."*

> *"Strong working knowledge of the Salesforce data model... hands-on experience with CPQ."*

My proof

Deal-economics modeling, Sensata: built the Bleeders and Leakers dashboard across 1,200 opportunities, then closed $700K+ of it, not just flagged the gap.

Bottleneck to fix, Sensata: raised distributor margins 53% to 61% by rebuilding the pricing logic itself, not a one-time override.

CPQ and Salesforce fluency, PriceKeel: built and configured the CRM, CPQ and approval process from a blank page.

AI-assisted workflow: automate repetitive deal review with Claude AI agents at Applied Materials today.

THE PROOF, IN DEPTH

Model the economics, close the deal, then fix the process so the next one is faster.

The same three-step pattern, run at Sensata and PriceKeel: build the model that shows where margin is leaking, close the deal on the structure that actually works, then fix the process behind it.

$700K+ Recovered

Deal Economics, Sensata

1,200 opportunities ranked against a $627M target, then closed through direct negotiation on competitive gaps and willingness to pay.

53% to 61%

Margin Fix, Not Override

Distributor and channel-partner margins raised by correcting the pricing and approval logic itself.

CPQ Built From Zero

Process Ownership, PriceKeel

CRM, CPQ and deal-approval process designed and run end to end, with an audit trail Finance can trust.

None of these sat in a dashboard. Each one closed the loop from a modeled number to a signed deal or a fixed process.

FIRST 30 DAYS

What the first month on Iterable's Deal Desk looks like.

WEEK 1

Map the quote-to-order path and the queue

Walk the current CPQ, approval and contracting flow end to end, and find where deals actually stall against the Deal Desk SLA.

Why first: the same first move behind the PriceKeel CPQ build, see the real path before changing it.

WEEK 2-3

Own the first complex, non-standard deals

Take ownership of live Deal Desk escalations, modeling margin and attach rate the way the Bleeders and Leakers program did, and recommend structures that close.

Why now: credibility with Sales comes from closing real deals first, not from a process memo.

WEEK 4

Fix the first process bottleneck

Apply the same discipline that fixed Sensata's distributor-margin logic to the highest-friction step in Iterable's quoting or approval flow, with metrics to prove it worked.

Why this fast: a bias for action without waiting on perfect data, the same call made at every seat so far.

CLOSE

You are hiring someone to build the Deal Desk while running it. I have already done both, with the margin recovered to prove it.

The deal-economics half: **$700K+ recovered in two quarters** at Sensata, and **53% to 61% margin raised** by fixing pricing logic, not overriding it.

The process half: **CRM, CPQ and deal-approval process built from zero** at PriceKeel, the exact "build how Deal Desk scales" half of this mandate.
