PITCH DECK | KARYA ENTREPRENEUR IN RESIDENCE

Karya X needs someone who turns a raw hypothesis into a signed, revenue-generating contract. I am running that exact loop right now, at my own company, with the number attached.

A $700K+ margin program built from zero at Sensata, and a live B2B SaaS product built, piloted and funded from scratch at PriceKeel.

- **Founder, right now**: PriceKeel, built, piloted and raising its first round
- **$700K+ recovered** from a margin program built with no existing tool
- **Zero-to-one shipped**: SwipeHire, PRD to 50+ users
- **5-consultant team led** on a market-entry study presented to leadership
- **AI agents built on Claude** automating my own recurring analysis

WHY THIS DECK EXISTS

The job is not "manage a roadmap." It is taking a raw hypothesis through pilot, product-market fit and a signed contract, alone.

What that actually requires

Foundational grit: having already built something out of nothing, not managed something someone else started.

A builder mindset that goes from a hypothesis to a functional pilot without a roadmap handed down from above.

A real revenue pipeline: early adopters found, design partners secured, and the first contract actually signed.

What I have already run

At **PriceKeel**, I am founding and running a B2B SaaS pricing company today: product, pilots and fundraising, with no playbook to copy.

At **Sensata**, I turned a vague margin mandate into the Bleeders and Leakers program: a $627M-target dashboard that did not exist before I built it.

At **SwipeHire**, I shipped an AI product zero-to-one, from PRD to 50+ early users, validating demand before scaling.

> **The through-line: every one of these started with no existing tool, no existing team and no existing playbook, and ended with a number leadership could act on.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Previously founded a startup or were a member of the core founding team. You know exactly what it takes to build something out of nothing."*

> *"Moving beyond theory to build a tangible commercial engine: identify early adopters, secure design partners, and sign the first revenue-generating contracts."*

> *"Influence founders and stakeholders across leadership teams to collaboratively experiment new ideas."*

My proof

Founder, right now: built PriceKeel's product, guardrail engine, CRM/CPQ and deal-approval process from a blank page, and am running pilots and raising the first round.

Commercial engine, Sensata: turned 1,200 untracked opportunities into $700K+ actually recovered in two quarters by negotiating on competitive gaps and willingness to pay.

Cross-functional influence, Applied Materials: turns Sales, Engineering and Accounts input into one market view leadership acts on today.

Leadership presentation: led a 5-consultant team through a market-entry study presented directly to Safran's leadership.

THE PROOF, IN DEPTH

Find the hypothesis, build the pilot, then close the first real contract.

The same three-step pattern, run at PriceKeel and Sensata and on SwipeHire: define what is actually being tested, build the thing that tests it, then turn the result into a signed outcome.

$700K+ Recovered

Commercial Engine, Sensata

1,200 opportunities ranked against a $627M target, then closed through direct negotiation, no existing tool to start from.

Live and Raising

Founder Build, PriceKeel

Product, pilots and the company's first fundraising round, built and run end to end from zero.

50+ Users

Zero-to-One, SwipeHire

PRD to MVP to first 50 users, with 3 pricing tiers validated against real willingness-to-pay signals.

None of these were a plan that sat in a deck. Each one became a working pilot, a signed deal, or a product real users touched.

FIRST 30 DAYS

What the first month on Karya X looks like.

WEEK 1

Turn one problem statement into a testable hypothesis

Take the raw moonshot question and frame it the way PriceKeel's first hypothesis was framed: what is the smallest pilot that proves or kills it fast.

Why first: the same first move behind every build I have run, size the real question before building anything.

WEEK 2-3

Ship the pilot and find the first design partners

Build the mobile-first pilot, run it with real users in the field, and start the conversations that could become the first design partners.

Why now: the same builder-to-user loop that took SwipeHire from PRD to 50+ users.

WEEK 4

Close the first revenue-generating contract

Apply the Sensata negotiation discipline, built on competitive gaps and willingness to pay, to sign Karya X's first real contract, not just a pilot agreement.

Why this fast: a bias for action without waiting on perfect data, the same call made at every seat so far.

CLOSE

You are hiring someone to build a new business line out of nothing. I am doing exactly that right now, with the number attached, at a company I founded myself.

The builder half: **PriceKeel, live and raising its first round**, built from zero with no playbook, and **SwipeHire, shipped zero-to-one** to 50+ early users.

The commercial half: **$700K+ recovered in two quarters** at Sensata by turning an ambiguous mandate into signed outcomes, the exact "revenue pipeline development" this role asks for.
