Hiring Team, Modern Treasury

Your posting says this isn't a maintenance seat, and the backlog proves it: account hierarchy, opportunity and product data model, lead routing, customer lifecycle, all inherited on day one. I built that kind of system myself at PriceKeel, where I set up the CRM, CPQ and deal-approval routing end to end, then the audit trail Finance reviews before anything ships. Nobody handed me that architecture; I designed it, shipped it, and stood behind it.

The line that made me write in was "you bring the hands-on tool expertise that keeps the architecture honest." At Sensata I built the Bleeders and Leakers Power BI system that tracked 1,200 pipeline opportunities against a \$627M target across 3 regions and 20 product lines, and the \$700K+ in margin it recovered came from data that was clean enough to act on, which only happens when someone owns the fields and the logic behind them, not just the dashboard on top.

You're also explicit that you want someone who partners with Engineering to replace repetitive GTM work with agents rather than just talking about AI. I do that daily as Strategic Marketing III at Applied Materials, where I've automated recurring analysis work with Claude-built agents instead of running the same query by hand every week. That is the exact muscle this role is hiring for: use AI to move faster, then stand behind what you ship.

I want a stack that is actually changing, not one I'm keeping the lights on for, and a fast sign-off loop instead of a committee. Proof trail at adhithyabhaskar.vercel.app/ref/moderntreasury.
