Hiring Team, Zuora

Your posting asks for a PM who can also teach, write and tell the story, and the clearest proof I have is that I already run AI agents built on Claude to automate my own recurring analysis at Applied Materials, not just explain agentic workflows in a meeting. I also built a chatbot for an education platform, pairing R-based statistical analysis with automated user interaction, a self-service learning shape close to what you are asking this role to ship for ZEOs.

Discovery and enablement are where I actually spend my time. At Sensata I ran 30+ structured interviews with OEMs and distributors to find where users got stuck, then turned that into product enhancements that lifted CSAT 22%. I also built the sales enablement and training content, decks, case studies and guides, that got 50+ reps productive on new launches fast, the same train-the-field work a champions program and a self-service learning hub need.

Roadmap and delivery follow the same pattern. I defined and executed the product roadmap for sensor solutions, managing a 100+ feature backlog with engineering across 3 regions in Agile, cutting time-to-market 20% and speeding releases 25%. None of that lands without clear writing: I wrote the positioning and messaging that turned technical sensor features into customer value, obsessing over specific words for the right audience to lift conversion 15% on priority launches.

Today as Strategic Marketing III at Applied Materials I carry P&L targets and run the OKRs and cross-functional reviews that keep Sales, Engineering and Accounts aligned on roadmap, status and trade-offs, the same matrixed stakeholder cadence this role runs with Security, Legal and Data. I would like to bring that build-and-teach loop to Zuora's Enterprise AI products. Proof trail at adhi-product-ai.vercel.app/ref/zuora.
