Hiring Team, Meta

Your posting describes a role that influences product strategy and positioning through data and insight, then has to make that positioning hold up across comms, policy and research before it ever reaches a consumer. That sequence is the job I already do. At Sensata, I shaped go-to-market and positioning for a new sensing product line by first running 30 plus structured interviews with the actual buyers, then aligning Product, Engineering and Sales around what that research said, not what the launch deck assumed. The result was \$2M plus in first-year revenue and a 15% lift in conversion on the launches built that way.

The scale is different here, but the discipline is not. You need someone who can hold a consistent narrative across apps and audiences while the priorities underneath keep moving, and that is where my background in consumer and performance marketing fits. I have run D2C portfolios at Pixis across eight clients and international markets, rebuilt catalog feeds that drove 16x ROAS for e-commerce brands, and presented customer-research findings straight to leadership for budget calls at Plug Power. Each of those required reading consumer behavior first and only then deciding what the campaign or the message should say.

I also bring the AI fluency this req asks for as a working habit, not a slide. At Applied Materials I automate recurring market and competitive analysis with AI agents built on Claude, which frees my time for the judgment calls a model cannot make, like how to frame a tradeoff for an executive audience or when a data point actually changes a launch plan. I keep sharpening that skill deliberately rather than treating one course as the finish line.

What I would bring to the Cross-Meta Ecosystem team is someone who has already built the loop this role needs: consumer insight that shapes positioning, positioning that survives contact with product and policy, and launch work measured by adoption, not just output. Proof trail at adhi-product-ai.vercel.app/ref/meta.
