Hiring Team, Nectar

Your posting frames this seat as turning marketing spend into pipeline and revenue, reporting straight to your VP of GTM, and that ownership model is exactly how I already work. At Plug Power I owned $100K/month budgets across multiple business units, built the plan each quarter, and ran Paid Search and Paid Social across Google, Microsoft, Meta and LinkedIn to -25% CPA. At Sensata I built a demand funnel from scratch with no existing playbook to copy, email and paid launch campaigns that drove +35% qualified leads for a GTM I had to define as I went.

Creative is where names like Oura, Caraway and Kosas live or die, and it is where I spend the most time per campaign. At Pixis I delivered 3x ROAS in one month for a stalled fashion-brand account by rebuilding the funnel end to end: feed cleanup, smart bidding, a full creative refresh and lookalike expansion, then used Amplitude and Tableau across 30+ campaigns to decide weekly what to scale. That full-funnel instinct, test the creative first and then fix the mechanics underneath it, is what a social-first campaign for a brand-community customer base needs from the person who owns the budget.

The RevOps half of the role, closing the loop between paid, nurture and sales, is where I built my own playbook: a B2B lead-generation program pairing LinkedIn Ads and Paid Search with CRM lead-scoring handoffs that convert ads into SQLs, plus the Salesforce, Adobe Analytics and GA stack I automated at Plug Power for closed-loop attribution. That is the martech foundation your RevOps team needs reporting numbers from on day one, not three months in.

I know what building a function at an early-stage company looks like because I have done it: standing up a demand funnel from zero at Sensata, and building an AI job-matching platform's entire GTM and analytics stack as its only growth owner. I use Claude AI agents daily to automate my own reporting at Applied Materials, the same AI-native habit a 60-person team scaling fast wants from a demand-gen hire. Proof trail at adhi-growth-ai.vercel.app/ref/nectar.
