Hiring Team, Fivetran

Your posting asks for someone who can run a multi-account commercial book and still get a clean handoff to sales on every qualified lead. That was my job at Pixis: I hired and managed an 8-person team covering 8 client accounts at $15K to $90K in monthly spend each, carrying P&L and revenue targets for the full portfolio, and cut churn 50% through account-level playbooks built for that exact kind of small-to-midsize book. That is the same muscle a commercial-segment demand-gen role runs on, just applied to pipeline instead of ad spend.

The channel and KPI side is not new to me either. At Sensata I ran email and launch campaigns for new sensing products across North America and Europe, generating 35% more qualified leads on a clean MQL/SQL definition, then built the SQL and GA4 KPI frameworks that told the sales team which accounts and cohorts to prioritize first. At Plug Power I owned $100K/month budgets across multiple business units and automated the WordPress-to-Pardot lead flow end to end, cutting cost per lead 50% while keeping the handoff to sales clean. Both of those are the same cross-channel, sales-aligned motion your Commercial segment work needs, built on Salesforce instead of a different CRM.

I like that Fivetran and dbt Labs are mid-integration right now, because the regional playbook and ICP work for the Commercial segment is still being written rather than run from an old template. I already automate the repetitive side of campaign and revenue reporting with Claude AI agents in my current role at Applied Materials, and I built a B2B lead-generation playbook on my own time, combining LinkedIn Ads and Paid Search with CRM lead-scoring handoffs, which is close to the 1:few and 1:1 ABM work this role owns for the SMB segment.

I would like to bring that demand-gen discipline to Fivetran's Commercial marketing team. Proof trail at adhi-growth-ai.vercel.app/ref/fivetran.
