

PITCH DECK | SCALEAI ENTERPRISE DEAL DESK ANALYST

Scale's Enterprise pipeline runs Land, Expansion and Framework deals at once. I have already built the dashboard and the audit trail that keep deals like that from stalling.

Deal pricing execution, margin visibility and cross-functional deal coordination from someone who builds deal-approval tools on the side.

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

1,200 pricing opportunities ranked against a \$627M target, 3 regions

53% to 61% distributor margin lift via deal structures that held

PriceKeel - founder of an audit-trail and deal-approval tool for B2B SaaS pricing

+12% YoY revenue, +8% share via price realignment vs. 10+ competitors

The problem is not deal volume. It is **deals that stall waiting on the next sign-off.**

What a fast-scaling Enterprise pipeline runs into

Land, Expansion and Framework deals move through pricing, ROI modeling and EPD staffing inputs before Accounting, Finance, EPD and Legal even see the package, and every non-standard deal adds a new place for it to sit unreviewed.

Without one view of deal status, pricing and margin across the pipeline, Sales and Deal Desk leadership find out a deal stalled after it already cost a quarter.

The fix is not another approval step. It is a dashboard that shows the bottleneck early, and a routing habit that keeps deal packages moving instead of waiting.

What I have already run, at smaller scale

At **Sensata**, I built the Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities against a \$627M target, with deal status, pricing and margin visible by region and product line.

I did not stop at visibility. I **redesigned the deal structures** underneath the worst gaps, which is why the 53% to 61% distributor margin lift held past the first quarter.

I am now building **PriceKeel**, an audit trail and guardrail engine for discount exceptions, because a deal desk needs a reason Finance can point to, not just a report.

Deal Pricing Execution, Pricing and Deal Status Reporting, and Process Optimization are describing this exact loop: see the bottleneck, fix the deal structure behind it, make the fix explainable enough that the next deal does not hit the same wall.

What the Enterprise Deal Desk Analyst opening asks for, and where the proof sits.

What the role covers

- "Manages day-to-day deal pricing calculations, including ROI modeling and EPD staffing inputs."*
- "Builds and maintains a pricing dashboard tracking deal status, pricing, margin and overall deal health."*
- "Ensures Accounting, Finance, EPD and Legal review and approve deals at the appropriate stage."*

My Proof

- Bleeders and Leakers dashboard at Sensata:** built the system, surfaced \$433M in margin gaps, then closed \$700K+ of it in 2 quarters through negotiated fixes, not just a report.
- Cross-functional routing by necessity:** the 53% to 61% distributor repricing required sign-off from Finance on the model and Sales on what a partner would accept, before it shipped.
- Applied Materials today:** partner with Sales, Engineering and Accounts to turn field input into one pricing view leadership uses against P&L and revenue targets.
- Process optimization as a habit:** PriceKeel exists because I kept seeing the same discount-exception bottleneck and built the audit trail instead of re-solving it by hand each quarter.

Bleeders and Leakers: see the bottleneck, fix the structure, make it hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line, the same shape as a deal-status dashboard across an Enterprise pipeline.

\$433M

Margin Gaps Surfaced

The dashboard's job: rank every pricing opportunity so leadership could prioritize by salesperson and product line instead of chasing anecdotes.

\$700K+

Margin Recovered in 2 Quarters

Closed through negotiations built on competitive gaps and documented customer willingness to pay, not across-the-board price hikes.

53% to 61%

Distributor Margin Lift

Redesigned the channel deal structure itself, so the gain outlived the first repricing pass instead of drifting back within a quarter.

The same BU also ran multimillion-dollar customer quotes alongside senior executives, where pricing, Finance and Legal all had to sign off before a deal moved. The common thread: every fix was cross-functional and every fix was measured after it shipped.

What the first month on Scale's Enterprise deal desk looks like.

WEEK 1 Map the bottleneck Pull the last 90 days of Land, Expansion and Framework deals and trace where each one sat longest, whether that is ROI modeling, EPD staffing sign-off, or Legal review. Sit with the Deal Desk Manager and Sales to hear where the current process creates friction. ----- Why first: the bottleneck is usually visible in the data before anyone names it. Same move that started the Bleeders and Leakers program.	WEEK 2-3 Ship the dashboard view Build the pricing dashboard tracking deal status, pricing, margin and deal health across the Enterprise pipeline, and pressure-test it against the top 3 stalled deals with Sales, Finance and EPD before it goes live. ----- Why now: ranking against a real target, then verifying with the cross-functional group, is what made the 53% to 61% distributor gain stick.	WEEK 4 Standardize the routing Turn the deal-review lessons into a repeatable workflow: a routing order for Accounting, Finance, EPD and Legal, and a cycle-time view that flags which stage is slowing a deal down before it stalls. ----- Why this fast: a dashboard matters less if the routing behind it stays ad hoc. Repeatability is the actual ask behind "process optimization."
---	--	---

CLOSE

You are hiring someone to keep Enterprise deals moving. I have already built the dashboard and the discipline that does exactly that.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and **+12% YoY revenue with +8% market share** from price realignment against 10+ competitors, all run cross-functionally with Sales and Finance while carrying P&L targets for the BU.

What is harder to find is someone who has also spent the last several months building the deal-approval product a fast-scaling company like Scale would eventually want internally. **I am building that at PriceKeel right now**, which means the process-optimization instinct behind this role is not something I would need to develop on the job.
