Hiring Team, AssetWatch

Your posting asks for one person to own full-funnel, multi-channel demand campaigns end to end, built and run in HubSpot and tied straight to qualified pipeline and revenue. That is the same ownership model I ran at Plug Power: $100K/month budgets across multiple business units, Paid Search and Paid Social across Google, Microsoft, Meta and LinkedIn, and a WordPress-to-Pardot lead flow I automated myself, which cut CPA 25% and cost per lead 50%.

The industrial-machinery side of this role is not new territory for me either. At Sensata I built a KPI framework in SQL and GA4 across 50,000+ connected industrial sensors sold through OEMs and distributors, with no existing demand playbook to copy, and turned email and paid launch campaigns into +35% qualified leads. I know what it takes to get a technical buyer in manufacturing from first touch to a sales conversation, because I have built that funnel from a blank page before.

The RevOps half of this seat, where campaign performance has to roll into dashboards sales and product marketing both trust, is where I built my own habits: lead scoring and MQL/SQL handoffs on Salesforce and Pardot, closed-loop attribution through Adobe Analytics and GTM, and A/B testing (15+ tests at Plug Power) run as a standing practice rather than a one-off project. Moving that discipline onto HubSpot is a tooling swap, not a new skill.

I also automate my own reporting with Claude AI agents in my current role at Applied Materials, which keeps the dashboard work fast enough to leave more time for the campaigns themselves. Proof trail at adhi-growth.vercel.app/ref/assetwatch.
