Hiring Team, DoorDash

The line in your posting that stood out was "decide whether to scale, iterate or stop" before a pilot ever reaches a national launch. Most GTM teams write that sentence into a deck and then skip it under deadline pressure. I have run it as the actual job: at Sensata I owned the go-to-market for a new sensing product line from a cold hypothesis, ran 30+ structured willingness-to-pay interviews with OEMs and distributors before committing to a positioning, and only then scaled the launch across North America and Europe to $2M+ in first-year revenue. The interviews are what decided whether the product shipped as pitched or got repositioned first.

That same research-before-scale habit is what the Expansion Pod's work on DashLink, Catering, Alcohol and Parcels sounds like it needs. I size a market before I message it: the KPI frameworks I built in SQL and GA4 across 50K+ connected devices surfaced the cohorts that were actually adopting versus the ones a launch plan assumed would, and the positioning I rebuilt around what the interviews actually said lifted conversion 15% on priority launches. I would rather find out in week two that a concept test says no than find out in month six that a national rollout did.

I also know what it is to run this with no playbook and no team, because I built one myself. SwipeHire was a zero-to-one AI job-matching platform I shipped alone, PRD to MVP to pricing: I tested three subscription tiers against competitor benchmarks and willingness-to-pay signals, ran 8+ A/B tests and 12+ user interviews, and used what I learned to lift activation 25%. Today I carry that same habit into Applied Materials, where I automate the repeatable parts of my own analysis with AI agents built on Claude so more time goes to the part of the problem nobody has structured yet, which is exactly where a new earning opportunity for Dashers starts.

I would like to talk about which new earning opportunity is closest to its first pilot decision and what the success criteria for scaling it look like. More of the work is at adhi-product-ai.vercel.app/ref/doordash.
