Hiring Team, NVIDIA

Your posting asks for a data model that turns scattered pricing and rebate data into one source of truth. I built exactly that at Sensata: the FY2026 Bleeders and Leakers data model, consolidating 1,200 pricing opportunities across 3 regions, 4 product families and 20 product lines into one Power BI dashboard against a $627M target. That model surfaced $433M in margin gaps for leadership to prioritize, and it helped recover $700K plus in margin in two quarters, not by guessing but by reconciling what each system said about the same deal.

The other half of your req is turning ad hoc analysis into a production workflow instead of a one-off deck. I run that discipline today at PriceKeel, the company I founded: I set up the CRM, CPQ and forecast reviews myself, and I built the audit trail that gives Finance an explainable record behind every pricing exception, so compliance is not bolted on after the fact. It is the process optimization and standardization your Sales Finance Revenue Analytics team is asking for, applied to a smaller company first.

I have also priced inside hardware, not only software. At Applied Materials, a semiconductor equipment maker, I build forecasting and revenue models across multiple product groups and size the market with Sales and Engineering, carrying P&L and revenue targets along the way. I automate the repetitive parts of that analysis with AI agents built on Claude, the kind of automation your posting names as a priority, and I run the weekly and quarterly business reviews that keep the reporting consistent instead of rebuilt each cycle.

At Sensata I also built a BU-wide Power BI price-increase model that flagged line items where a price change could lift profitability more than 50%, and I worked AP26 revenue models and multimillion-dollar customer quotes alongside senior executives, the financial modeling and reconciliation this role runs at NVIDIA's scale. I would like to bring that same habit, build the model first, then make it everyone else's source of truth, to your Product FP&A team. Proof trail at adhi-pricing-ai.vercel.app/ref/nvidia.
