Hiring Team, Lyft

Your posting describes a function that doesn't fully exist yet in a clean form: one person owning CPM floors and rate card discipline, holding a managed service vendor to its economics, and building the commission math that pays Ads and Business sellers. I've run the first two pieces, just against a different kind of deal. At Sensata I led the Bleeders and Leakers program, evaluating deal by deal structures against margin thresholds and repricing parts sold through distribution, which recovered $700K in margin in two quarters and lifted distributor margins from 53% to 61%. The deal was an industrial part instead of an ad impression, but the math underneath it, a floor, a threshold, a defensible reason to hold or move it, is the same math this role runs against CPM floors.

I built the muscle to systematize that judgment with PriceKeel, the company I founded. It reads a discount exception against a margin threshold before a deal closes and keeps an audit trail Finance can actually use, the same evidence a centralized pricing function needs when Sales asks for an exception and Accounting needs to know why it was granted. Running PriceKeel also means I set up and run my own CRM and CPQ configuration end to end, so the systems coordination piece of this role, sitting between pricing, revenue recognition and Accounting, isn't new ground.

What I like about this req is that it's honest about being three jobs stitched into one: pricing, vendor oversight, and compensation administration, inside a function that's still being centralized. That fits someone who has already run a small pricing shop end to end better than it fits someone who has only ever owned one lane of it.

I would like to bring that discipline to Lyft's pricing, yield and compensation function. Proof trail at adhi-pricing-ai.vercel.app/ref/lyft.
