Hiring Team, NVIDIA

Your posting for the Sales Operations Analyst seat describes the loop I already run: a customer forecast that has to hold up through quotes, special pricing, rebates and EOL terms, with Finance and Credit signed off before anything closes. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard that gave leadership visibility into 1,200 pricing opportunities against a $627M target across three regions, ranked by win rate, dollar-per-win and stage. The dashboard surfaced $433M in margin gaps. The $700K+ I recovered in the two quarters after came from sitting in the deal room and renegotiating the structures it flagged, not from reporting the gap up the chain and waiting.

The semiconductor piece of your "what we need to see" is not new ground for me either. At Applied Materials I partner with Sales, Engineering and Accounts to size the semiconductor market and build the forecasting models that keep pricing in step with demand across multiple product groups, work that lives on the same P&L-and-revenue-target cadence your Americas Sales Operations team runs for OEM accounts. Earlier at Sensata I shaped AP26 revenue models, site-transition strategies and multimillion-dollar customer quotes directly with senior executives, and raised distributor and channel-partner margins from 53% to 61% by fixing the deal structures underneath them rather than discounting around the problem.

I also built the systems side of this from the ground up at PriceKeel, where I run the company's CRM, CPQ, forecast reviews and deal approvals myself as the only ops person in the building, with an audit trail that gives Finance evidence for every discount call. That is the same standardized-reporting habit your posting asks for: one forecast and fulfillment view that Operations, Finance, Sales and Product can all read the same way.

I would bring that same habit, close the loop between the quote and the close, to NVIDIA's OEM and strategic accounts. Proof trail at adhithyabhaskar.vercel.app/ref/nvidia.
