Hiring Team, Plaid

Your posting says the Financial Management team owns Transactions, Investments and Liabilities end to end, from sizing the problem with customers through engineering through the metrics it ships against. That is the same shape of work I did at Sensata: I owned GTM for a new sensing product line end to end, positioning through pricing through channel through launch, with no existing playbook to lean on, and took it to \$2M+ in first-year revenue. The roadmap behind it was not handed to me either. I defined it myself, managed a 100+ feature backlog with engineering across 3 regions, and used 30+ customer interviews to decide what shipped next, not just what customers asked for first.

Two lines in your qualifications stood out because they are the part of this job most PMs talk around: influencing pricing and packaging, and sitting in the sales and account conversations that shape a deal. At Sensata I partnered with senior executives on multimillion-dollar customer quotes and repriced parts sold through distribution, raising channel-partner margins from 53% to 61% in under two quarters. At Pixis I ran an 8-client account portfolio directly, carrying P&L and revenue targets and the account strategy conversations that came with keeping those clients, which cut churn 50%. Pricing and account work are not adjacent to product for me. They are where I learned what a roadmap actually has to defend.

You also note that AI is changing how consumers use PFM tools, and I have an opinion on that because I live it twice over. I automate repetitive analysis with AI agents built on Claude at Applied Materials today, and I built an AI product zero-to-one, SwipeHire, with a live API integration behind it: wrote the PRD, scoped the MVP, modeled 3 pricing tiers from competitor teardowns, and ran 8+ A/B tests that lifted activation 25%. The pattern that carries over to a data aggregation product like Plaid's is the same one: let the model take the repetitive step, and spend the saved time on the judgment call about what the data should do for the customer next.

I would welcome 15 minutes to talk through how this maps onto Financial Management's roadmap. Proof trail at adhi-product-ai.vercel.app/ref/plaid.
