Hiring Team, Google

A 5-consultant team I led at Safran had to turn 170 facilities across four verticals into a defensible SAM of 28, with a market-entry case we then presented straight to Safran's leadership. That is the operating-partner motion your posting describes: pull scattered input from multiple functions into one strategic view, then run the annual planning cycle that decides where Search and Maps Marketing puts its resources next.

My opinion on strategy and operations work is that an annual plan is only as good as the resourcing fight it survives inside the building. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard, ranking 1,200 pricing opportunities against a \$627M target across 3 regions, and surfaced \$433M in margin gaps that leadership then had to prioritize by team and product line, not just read about in a deck. I ran that same executive-facing motion on AP26 revenue models and site-transition strategy directly with senior executives, and 10+-competitor benchmarking turned into +12% YoY revenue and +8% market share once the strategy actually got funded.

At Applied Materials I size the semiconductor market with Sales, Engineering and Accounts pulling in the same direction, and I automate the recurring parts of that analysis with AI agents built on Claude so the strategy work gets the hours instead of the spreadsheet. I want to run that same discipline at Google's scale, where the resourcing decisions and the stakeholders are bigger but the underlying job, turning an ambiguous strategic question into a plan someone senior can act on, is the same one.
