Hiring Team, Upstart

At Sensata I managed a 100+ feature backlog for sensor products used across 3 regions, but it was the 30+ customer interviews with OEMs and distributors behind it that cut time-to-market 20% and raised CSAT 22%. That is the job description for Auto Retail: turn direct conversations with the people doing the workflow every day into a roadmap that measurably lifts engagement. Dealers are the customer here instead of OEMs and distributors, but the discipline is the same: sit with them, find where it breaks, ship the fix.

Activation is the other half, and it is where SwipeHire lives. I built it zero-to-one: wrote the PRD, scoped the MVP, owned the GA4 and GTM analytics stack, and ran 8+ A/B tests against onboarding that lifted activation 25% among more than 50 early users. Getting someone past their first use and into a habit is a different problem than getting them to sign up, and it is the one your team is solving for dealership workflows right now.

The cross-functional half is familiar too. At Applied Materials I partner with Engineering, Sales and Accounts to turn field input into forecasting models across multiple product groups, and I automate the repetitive side of that work with Claude AI agents so the time goes into judgment calls instead. Earlier, at Plug Power, I connected a Mar-Tech stack across Salesforce, Adobe Analytics, GA and Google Tag Manager for closed-loop reporting: wiring new data into tools a team already used instead of asking them to adopt something new, the same shape of problem as connecting Upstart to the CRM and dealer management systems your dealers already run.

What I would bring to Auto Retail is a product manager who already runs this loop: sit with the customer, find the workflow break, ship against a roadmap, and measure activation and engagement with both the number and the interview that explains it. Proof trail at adhi-product-ai.vercel.app/ref/upstart.
