Hiring Team, Skydio

Your posting says this role shifts "between strategic and deeply tactical work within the same day." That is the exact rhythm of my last two quarters at Sensata: I built the Bleeders and Leakers program, a Power BI system ranking 1,200 pricing opportunities against a $627M target across 3 regions and 4 product families, surfaced $433M in margin gaps, and then recovered $700K+ of it by turning competitive and willingness-to-pay data into repricing moves that Sales and Finance could sign off on the same week. Pricing architecture one hour, a customer quote the next; I have not had a job yet where those two modes were separate.

The part of the posting that made me want to write this instead of just applying is "comfortable defending your model to the CFO and explaining pricing rationale to sales reps." At Sensata I built the AP26 revenue models with senior executives and then had to turn the same math into something a rep could say out loud on a call, because a pricing model that only survives in a room with Finance is not finished. The distributor and channel-partner repricing I ran raised margins from 53% to 61% and held, because both audiences signed off on the logic before it shipped, not after.

On the "structure ambiguous challenges" side: I led a 5-consultant team through a market-sizing and entry-feasibility project for Safran, taking 150+ facilities and a scattered set of inputs down to a SAM of 28 and a pricing and competitive-positioning recommendation we presented to their leadership. That is the same move as turning a half-formed ROI question from a Skydio customer into a business case someone can act on: you build the structure before you build the number.

The other thing I would bring is that I am currently building the tool a pricing team eventually wants internally. PriceKeel is a decision-integrity layer for B2B deal pricing, in pilots now, that reads a live discount exception and gives Finance an audit trail instead of a judgment call nobody can reconstruct later. I also automate the repetitive parts of pricing analysis at Applied Materials with Claude agents, which is the same instinct the posting calls "AI-native workflows that reduce manual work." Between the two, I have spent this year building pricing systems, not just running them.
