Hiring Team, Affirm

A "1: many" merchant growth product has to work without a person in the loop for every partner, which is the exact product I built with SwipeHire. I wrote the PRD, scoped the MVP and shipped an AI job-matching platform zero-to-one, and 50+ early users found it and completed onboarding on their own, no sales conversation required. I ran 8+ A/B tests and 12+ user interviews against that self-serve path and lifted activation 25%, the same loop a merchant onboarding funnel runs on when the product has to do the convincing at scale.

The roadmap and backlog ownership your posting asks for, from kickoff through post-launch, is the job I actually had at Sensata. I defined and executed the product roadmap for sensor solutions across automotive and industrial segments, managed a backlog of 100+ features with engineering in Agile across 3 regions, and cut time-to-market 20% while releases shipped 25% faster. I built the KPI frameworks in SQL and GA4 on 50K+ connected devices that told us which cohorts were actually adopting, the same success-metrics and OKR discipline a durable partner acceleration strategy needs to prove it is working.

Comfort with the commercial side is not theoretical for me either. As founder of PriceKeel I sell the product myself into RevOps, Sales leadership and Finance, and I run the company's own CRM, CPQ and pipeline reviews because there is no one else to hand that to. At Applied Materials I build the forecasting and market-sizing models that Sales, Engineering and Accounts all sign off on before a number goes into a plan, and I keep automating the repetitive parts of that work with Claude AI agents so the actual analysis gets more time.

Growing a merchant portfolio one integration at a time does not scale, and building the capability that lets the portfolio grow itself is the product problem I want next. Proof trail: adhi-product-ai.vercel.app/ref/affirm
